

MDA Pro User Manual

Please Read Before Proceeding

Microsoft, MS-DOS, Windows, Windows NT, Windows Server, Windows Mobile, ActiveSync, Excel, Internet Explorer, MSN, Outlook, PowerPoint, and Word are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

THIS DEVICE IS NOT CHARGED WHEN YOU TAKE IT OUT OF THE BOX.

DO NOT REMOVE THE BATTERY PACK WHEN THE DEVICE IS CHARGING.

YOUR WARRANTY IS INVALIDATED IF YOU OPEN OR TAMPER WITH THE DEVICE'S OUTER CASING.

EXPLOSIVE ATMOSPHERES

When in any area with a potentially explosive atmosphere or where flammable materials exist, the product should be turned off and the user should obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death. Users are advised not to use the equipment at refueling points such as service or gas stations, and are reminded of the need to observe restrictions on the use of radio equipment in fuel depots, chemical plants, or where blasting operations are in progress. Areas with a potentially explosive atmosphere are often, but not always, clearly marked. These include fueling areas, below deck on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles, such as grain, dust, or metal powders.

PRIVACY RESTRICTIONS

Some countries require full disclosure of recorded telephone conversations, and stipulate that you must inform the person with whom you are speaking that the conversation is being recorded. Always obey the relevant laws and regulations of your country when using the recording feature of your MDA Pro.

Important Safety Precautions

When using this product, the safety precautions below must be taken to offset possible legal liabilities and damages.

ELECTRICAL SAFETY

This product is intended for use when supplied with power from the battery. Other usage may be dangerous and will invalidate any approval given to this product.

SAFETY IN AIRCRAFTS

Due to the possible interference caused by this product to an aircraft's navigation system and its communications network, using this device's phone function on board an airplane is against the law in most countries. If you want to use this device when on board an aircraft, remember to turn off your phone by switching to Flight Mode..

ENVIRONMENT RESTRICTIONS

Do not use this product at gas or refueling stations. The use of this product is also prohibited in fuel storehouses, chemical plants, and locations containing explosives.

SAFETY FOR ENVIRONMENTS

Do not use this product in gas stations, fuel depots, chemical plants or where blasting operations are in progress, or in potentially explosive atmospheres such as fuelling areas, below deck on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles, such as grain, dust, or metal powders. Please be aware that Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

ROAD SAFETY

Vehicle drivers in motion are not permitted to use telephony services with handheld devices, except in the case of emergency. In some countries, using hand-free devices as an alternative is allowed.

INTERFERENCE WITH MEDICAL EQUIPMENT FUNCTIONS

This product may cause medical equipment to malfunction. The use of this device is forbidden in most hospitals and medical clinics.

NONIONIZING RADIATION

This product should be operated in the suggested normal condition only to ensure the radiative performance and safety of the interference. As with other mobile radio transmitting equipment, users are advised that for satisfactory operation of the equipment and for the safety of personnel, it is recommended that no part of the human body be allowed to come too close to the antenna during operation of the equipment.

Chapter 1

Getting Started

- 1.1 Getting to Know your MDA Pro and its Accessories
- 1.2 Installing the USIM or SIM Card
- 1.3 Battery Information
- 1.4 Starting Up
- 1.5 The Today Screen
- 1.6 Indicators
- 1.7 Using the Start Menu

1.1 Getting to Know your MDA Pro and its Accessories

Front, Top, and Left-side view

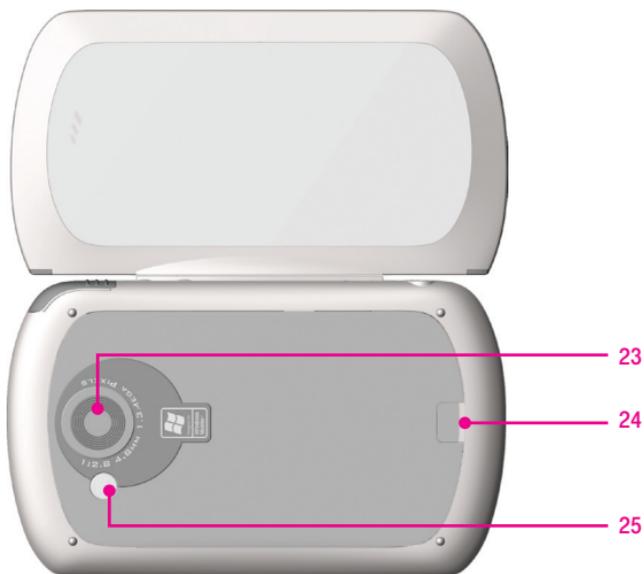

1	Speaker	Listen to audio media or a phone call from here.
2	Camera Button	Press to launch the camera. Press again to take a picture.
3	Voice Recorder/ Voice Recognition	Press to record a voice note or load the voice recognition programme.
4	Infrared Port	Lets you exchange file(s) or data with other devices wirelessly.
5	Backlight	Press to turn on the backlight.
6	Volume	Slide left or right to adjust the volume.
7	Power/Backlight	Press to turn on and off your MDA Pro or backlight.
8	Microphone	Speak into the microphone when receiving or making a phone call or voice recording.
9	MMC/SD Cards or SDIO Accessories Slot	Lets you insert a storage card (MMC/SD) for storing data.
10	Touch Screen	Use to write, draw, or make a selection with the stylus.
11	Navigation Pad	Press this multi-directional control up, down, left, or right to move through menus, programme instructions; carry out the selection by pressing the center button.
12	Video Camera Lens	
13	Notification LED	Bi-color LED on the right side: Green and Orange for GSM standby, SMS message, GSM network status, notification, battery charging status. Bi-color LED on the left side: Blue and Green for Bluetooth system notification of powered-up and ready to transmit radio frequency signal, and Wi-Fi status.
14	Light Sensor	When you use the device in a dark environment, the system will turn on keyboard backlight as you press any key.

■ ■ ■ Back, and Bottom view

Back View

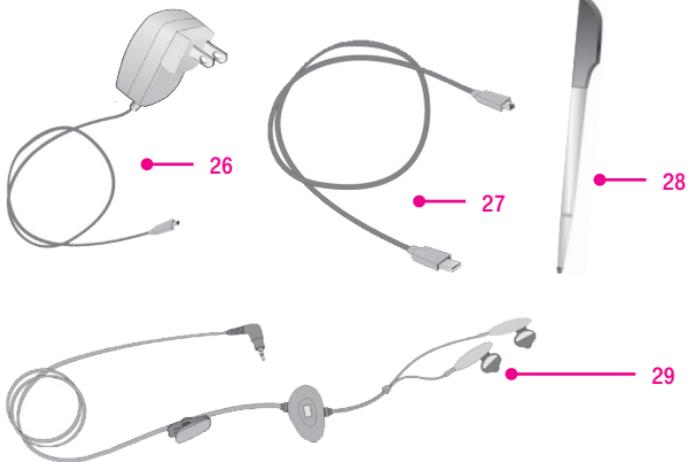

Bottom View

15	Send/Speakerphone	Press to take an incoming call, or to dial a number. Keep pressed for one second to activate Speakerphone.
16	End	Press to end a call.
17	Stylus and Stylus Slot	
18	WCDMA Car Antenna Connector	You can connect your WCDMA phone to a car antenna to utilise the superior reception quality.
19	GSM Car Antenna Connector	You can connect your GSM phone to a car antenna to utilise the superior reception quality.
20	Sync Connector	Use this connector for synchronising data or recharging the battery.
21	Soft Reset	With the stylus, press the Reset button to soft-reset your MDA Pro.
22	Earphone Jack	Allows you to listen to audio media or use the phone's hands-free kit.
23	Camera Lens	
24	Fixing Lock	Press to release the back cover.
25	Flash Light	

Accessories

The following accessories are provided with you MDA Pro:

26	AC adapter	Recharge the device battery.
27	USB cable	Connect your MDA Pro to a PC and synchronise data.
28	Stylus	
29	Stereo-wired headset with volume control jog dial and Send/End button	Pick up and hang up incoming and outgoing calls

1.2 Installing the USIM or SIM Card

Follow these steps to install a 3G USIM (Universal IC Card) or a GSM SIM (Subscriber Identity Module) card provided by your local network service provider that contains your phone number, service details, and phonebook/message memory.

1. Remove the back cover by pressing the fixing lock.
2. Push the red battery lock down to unlock the battery pack.
3. Press the clip on the right side to remove the battery.
4. Insert the SIM card into the SIM card slot with its gold contacts facing down. Its cut-off corner should match the cut-off corner in the slot. Push down lightly and forward to snap it into place.
5. Replace the battery and gently push down to snap it into place.
6. Push the red battery lock back up to lock the battery.
7. Replace the cover: Slide it back on, then push down lightly at the bottom to snap it securely into place.

1.3 Battery Information

Your device contains a rechargeable Li-ion polymer battery. Your MDA Pro is designed to use only manufacturer-specified original batteries and accessories. Battery performance depends on many factors, including your wireless service provider's network configuration, signal strength, the temperature of the environment in which you operate your device, the features and/or settings you select and use, items attached to your device's connecting ports, and your voice, data, and other programme usage patterns.

Battery life estimates (approximations):

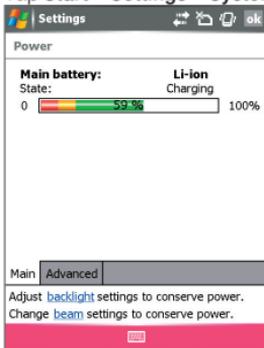

- Personal Digital Assistant (PDA): 15 hours
- Standby time:
 - GSM: 220 – 260 hours
 - WCDMA: 190 – 250 hours
- Talk time (Screen off):
 - GSM: 5 – 8 hours
 - WCDMA: 2 – 4 hours

Warning! To reduce risk of fire or burns.

- Do not attempt to open, disassemble, or service the battery pack.
- Do not crush, puncture, short external contacts, or dispose of in fire or water.
- Do not expose to temperatures above 60 °C (140 °F).
- Replace only with the battery pack designated for this product.
- Recycle or dispose of used battery as stipulated by local regulation.

To check the battery power

- Tap **Start > Settings > System tab > Power.**

Power Information

Charge the battery

New batteries are shipped partially charged. Before you can use your MDA Pro, you need to install and charge the battery. You can charge the battery by:

- Connecting your device directly to an external power source.
- Plugging the device sync cable into the USB port on your PC.

Low battery

When the low-battery warning appears, do the following:

1. Immediately save your current data.
2. Synchronise with your PC to charge the battery.
3. Turn off your device.

1.4 Starting Up

Turn the device on and off

To turn on the device, press the POWER button. When you turn on the device for the first time, you are asked to complete a calibration process. For more information, see “Calibrate the device” in this chapter.

To turn off the device, press POWER again.

Note Pressing POWER turns off your device temporarily and switches the device to sleep mode. However, you can still receive messages and calls while your device is in the sleep mode.

Calibrate the Device

Calibrating the device screen involves tapping with the stylus the center of a cross as it moves around the screen. This process ensures that when you tap the screen with your stylus, the tapped item is activated.

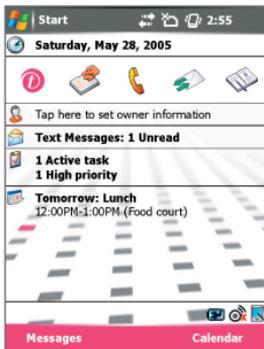

If your device does not accurately respond to screen taps, follow these steps to re-calibrate it:

1. Tap **Start** > **Settings** > **System** tab > **Screen**.
2. On the **General** tab, tap **Align Screen**, and follow the instructions on the screen.

Manage screen settings

The device touch screen has three orientation modes: Portrait, Landscape (right-handed), and Landscape (left-handed). Portrait mode allows you to get a better view or a better operation of certain programmes on your device, while Landscape mode may be optimal for viewing longer text files.

- To change the orientation, tap **Start > Settings > System tab > Screen**, and select the orientation you want.
- To smooth the edges of screen fonts for many programmes, on the **ClearType** tab, select the **Enable ClearType** check box.
- To increase the readability or to see more content on the screen, on the Text Size tab, adjust the text size by moving the slider.

Today Screen in Portrait Mode

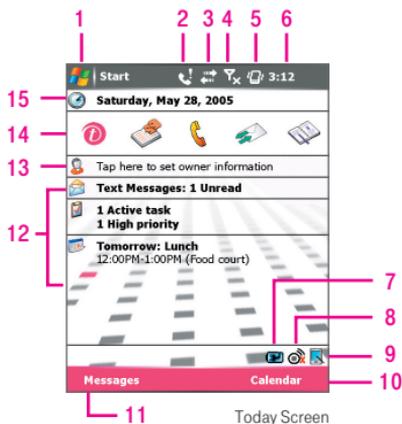

Today Screen in Landscape Mode

Note The screen orientation changes automatically when you open, unfold and rotate your device.

1.5 The Today Screen

The Today screen displays important information, such as upcoming appointments and status indicators. You can tap a section on the screen to open the associated programme.

- To access the Today screen, tap **Start > Today**.
- To customise the Today screen display, including the background image, tap **Start > Settings > Personal tab > Today**.

- 1 Tap to display the items listed in the Start menu.
- 2 Tap to view notifications.
- 3 Tap to view connectivity status.
- 4 Tap to view radio signal.
- 5 Tap to control device volume level.
- 6 Tap to see time and next appointment. Tap and hold to change time format.
- 7 Tap to open the Power Settings.
- 8 Tap to open the Wireless Manager screen.
- 9 Tap to change the display mode between Portrait and Landscape.
- 10 Tap to open Calendar screen for the day, month, and year.
- 11 Tap to open the Messages folder.
- 12 Your day at a glance with reminders.
Tap to open the related programme.
- 13 Tap to set owner information.
- 14 Tap to open a related programme from the quick launch panel.
- 15 Tap to change date and time.

Note You can access the Today screen from anywhere by tapping **Start > Today**.

1.6 Indicators

Following are some of the status icons that you may see on your device.

	Ringer on & adjusting sound volume
	Ringer in vibration mode
	Ringer off
	Battery level
	Main battery very low
	Battery empty
	Battery charging
	Connection is active
	Connection is not active
	Synchronisation in progress
	Synchronisation error
	Indicates maximum signal strength
	Indicates low signal
	Searching for phone service
	Indicates that the radio is turned off
	Roaming
	There are more indicators. Tap the icon to view all.
G	Indicates that the device has a valid SIM card installed on it, and the device is currently in the second-generation network (such as GPRS) coverage area.
U	Indicates that the device has a USIM card installed on it, and the device is currently in the third-generation network (such as UMTS) coverage area.

	Voice call
	Voice call in progress
	Data call in progress
	Calls are forwarded
	Call on hold
	Missed call
	No SIM card installed
	No SIM / USIM card installed
	Bluetooth
	Wi-Fi on
	Wi-Fi off
	Wi-Fi data call
	New e-mail or text message (SMS)
	New voice mail
	GPRS available
	GPRS in use
	GPRS monitor currently active

Following are some of the icons for the programmes that are already installed on your device.

	ActiveSync	Synchronises information between your device and a PC.
	Calculator	Performs basic arithmetic and calculations, such as addition, subtraction, multiplication, and division.
	Calendar	Keeps track of your appointments and creates meeting requests.
	Camera	Snaps photos or shoots video clips with accompanying audio.
	Contacts	Keeps track of your friends and colleagues.
	Download Agent	Provides information about the download status and the downloaded content from the Internet.
	EmailWiz	Allows you to select your e-mail provider from a list of available providers and simplifies the procedure to set up e-mail accounts.
	Enroller	Enables you to install and use certificates to connect to your Wi-Fi network.
	Excel Mobile	Creates new workbooks or lets you view and edit Excel workbooks.
	File Explorer	Enables you to organize and manage files on your device.
	Games	Lets you play two games; Bubble Breaker and Solitaire are included in this folder, by default.
	GPRS Monitor (In CD-ROM)	Keeps track of GPRS connections and tallies traffic charges.
	Help	Enables you to see Help topics for a programme on your device.
	Internet Explorer	Internet Explorer browses Web and WAP sites, and downloads new programmes and files from the Internet.
	Messaging	Sends and receives e-mail and text messages.
	MIDlet Manager	Enables you to download and install Java applications, such as games and tools, on your device.

	Notes	Creates handwritten or typed notes, drawings, and recordings.
	Phone	Makes and receives voice and video calls, switches between calls and sets up conference calling.
	Pictures & Videos	Collects, organizes, and sorts picture and video files in the My Pictures folder of your device or on a storage card.
	PowerPoint Mobile	Lets you view and edit PowerPoint slides and presentations.
	Search	Enables you to search contacts, data, and other information on your device.
	SIM Manager	Collects, organizes and sorts the contact list stored in your SIM card.
	SIM Toolkit	Allows you to access information and other services offered by T-Mobile.
	Streaming Video	Allows you to play live video streams.
	Tasks	Keeps track of your tasks.
	Windows Media Player	Enables the multimedia function on your device.
	Wireless Manager	Allows you to manage the Wi-Fi and Bluetooth connection.
	Wireless Modem	Enables your device as an external modem for a PC or Notebook by using a serial/USB port or infrared.
	Wireless LAN	Allows you to manage access to the wireless LAN connections.
	Word Mobile	Creates new documents or lets you view and edit Word documents.
	ZIP	Enables you to save memory and increase the storage capacity of your MDA Pro by compressing files in the conventional ZIP format.

1.7 Using the Start Menu

The Start menu, located at the top left corner of the Today screen, displays a list of programmes. It lets you close a screen and switch from one programme to another. You can start a programme by scrolling through the programmes list and then pressing ENTER, or by tapping a programme with the stylus. You can also access some of the most frequently used programmes from the folder commands of the quick launch panel, which appears on the Today screen. Each folder command opens a folder with more than one or more than one programmes. These are:

Start Menu

- 1 Tap to switch to a programme.
- 2 Tap to switch to a recently-used programme.
- 3 Tap to see more programmes.
- 4 Tap to change device settings.
- 5 Tap to see a Help topic for the current screen.

- T-Mobile Favourites (📍): Launches T-Mobile Favourites web site
- Contacts (📁): Launches either Contacts or SIM Manager
- Phone (📞): Launches Phone Dialer.
- Messages (✉️): Launches EmailWiz or Messaging.
- Organiser (📅): Launches Calculator, Calendar, Notes, or Tasks

Chapter 2

Entering and Searching Information

- 2.1 Introduction
- 2.2 Using the Hardware Keyboard
- 2.3 Using the Standard On-Screen Keyboard
- 2.4 Using Letter Recognizer
- 2.5 Using Block Recognizer
- 2.6 Using Transcriber
- 2.7 Using Phone Pad
- 2.8 Drawing and Writing on the Screen
- 2.9 Recording a Note
- 2.10 Searching Information

2.1 Introduction

When you select a field that requires text or numbers, Input Panel automatically becomes available. Input Panel provides access to the various input methods available on your device. By default, Input Panel appears as  on the menu bar. The icon indicates which input method is currently selected. The Input Selector arrow opens a list of available input methods.

To show or hide Input Panel

- Tap the Input Panel icon on the menu bar.

Icon Indicates the selected input method is

The on-screen keyboard.

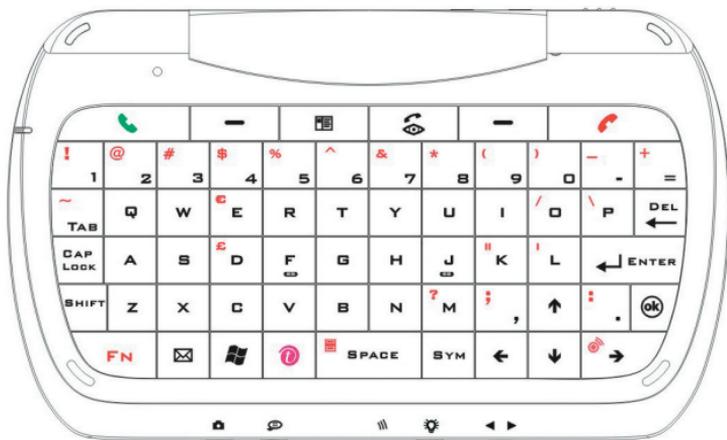

Letter Recognizer or Block Recognizer.

Phone Pad

Transcriber

2.2 Using the Hardware Keyboard

Flip open the device to reveal the hardware keyboard. It is similar to a standard keyboard on your PC. You can do the following with the hardware keyboard:

- To type lowercase letters, press the keys using your thumbs or fingers.
- To type a single uppercase letter or symbol, press . To use all uppercase letters, press .
- Press  to pick up a call, make a call, or send a message. You can also enable or disable the Speakerphone by pressing and holding the key for one second.
- Press  to end a call or cancel a message.
- Press  to make a video-enabled call in a 3G environment.
- Press  once to enter a second-layer symbol or number; press and hold the key for continuous second-layer symbol or number entries.
- Press  to enter symbols or special characters from a predefined list.
- Press  to quickly start Internet Explorer Mobile.
- Press  to verify your data entries.
- Press  to start the Messaging programme.
- Press  to start the Start menu.
- Press the numeric keys to enter numbers in text and when dialing.
- Press  for directional movement.
- Press  to access the list of your contacts.
- Press  to manage the Wi-Fi connection.

The following illustration displays the buttons on the side of your device.

-  - Slide left or right to adjust the volume.
-  - Press to launch the built-in camera.
-  - Press to turn the backlight on.
-  - Press to start Voice Speed Dial.
Press and hold to start recording and release to stop recording.

2.3 Using the Standard On-Screen Keyboard

The on-screen keyboard is available when text entry is possible. You can enter text by tapping keys on the keyboard that is displayed on the screen.

To enter text using the on-screen keyboard

1. In a programme, tap the **Input Selector** arrow, and tap **Keyboard**.
2. Enter text by tapping keys on the on-screen keyboard.

To enlarge the on-screen keyboard

1. Tap the **Input Selector** arrow.
2. Tap **Options**.
3. In the **Input method** list, select **Keyboard**.
4. Tap **Large Keys**.

2.4 Using Letter Recognizer

With Letter Recognizer, you can write individual letters, numbers, and punctuation, which are then converted into typed text.

To use Letter Recognizer

1. From a programme, tap the **Input Selector** arrow, and tap **Letter Recognizer**.
2. Write characters, numbers, and symbols in the designated writing area.
 - Enter capital letters by writing in the ABC (left) area of the box.
 - Enter lower case letters by writing in the abc (middle) area of the box.
 - Enter numbers by writing in the 123 (right) area of the box.
 - Enter punctuation and symbols by tapping in either area of the box and then writing the desired character.

Note Letter Recognizer is available when text entry is possible.

Tip For help with writing characters with Letter Recognizer, tap the question mark near the writing area.

2.5 Using Block Recognizer

With Block Recognizer, you use a single stroke to write letters, numbers, symbols, and punctuation, which are then converted into typed text.

To use Block Recognizer

1. From a programme, tap the **Input Selector** arrow, and tap **Block Recognizer**.
2. Write characters, numbers, and symbols in the designated writing area.
 - Enter letters by writing in the abc (left) area of the box.
 - Enter numbers by writing in the 123 (right) area of the box.
 - Enter symbols and punctuation by tapping in either area of the box and then writing the desired character.

Note Block Recognizer is available when text entry is possible.

Tip For help with writing characters with Block Recognizer, tap the question mark near the writing area.

2.6 Using Transcriber

Transcriber is a handwriting recognition programme that allows you to write in cursive, print, or a combination of both. Transcriber works transparently in the background of programmes, recognizing words with its integrated dictionary. When Transcriber is turned on, it interprets stylus movement anywhere on the screen as handwriting input.

Note For more information about using Transcriber, see [Help on your device](#).

To start Transcriber

1. Start a programme that accepts user input, such as Word Mobile.
2. Tap the **Input Selector** arrow, and tap **Transcriber**.
 - The Transcriber introductory screen appears.

To write using Transcriber

1. From a programme, position the cursor where you want text to appear.
2. Use the stylus to write anywhere on the screen.
 - The handwriting will be converted to text shortly after you lift the stylus from the screen.

To enter punctuation and symbols

Transcriber comes with an on-screen keyboard that provides an easy way to add punctuation or a special symbol to existing text.

- From a programme, tap  on the Transcriber toolbar. The keyboard remains visible until you tap the button again.

Tips To reposition the keyboard, tap and hold the title bar, then drag to the desired location.

When no text is selected, you can also open the keyboard by doing the  gesture.

To edit text

1. From a programme, draw a line across the text you want to edit.
2. After you lift the stylus from the screen, the line will disappear and the selected text will be highlighted.
3. Do either of the following:
 - Rewrite the text.
 - Use gestures to capitalize letters, insert a space, and so on. For information about using gestures, see “Transcriber Gestures” in this chapter.

Transcriber Gestures

Use quick strokes of the stylus to edit your text or to insert returns, spaces, or tabs.

Do	To
	Insert a paragraph return at the cursor. The horizontal portion of the gesture must be at least two times longer than the vertical portion.
	Insert a space at the cursor. The horizontal portion of the gesture must be at least two times longer than the vertical portion.
	Move the cursor one space back and erase any text. Do the gesture by drawing a line from right to left.
	Open the menu of alternate words if a word is selected or the on-screen Transcriber keyboard if no text is selected. Do the gesture by drawing a line straight down and back up.
	Change the capitalization of a selected letter, word, or block of text. Do the gesture by drawing a line straight up.
	Undo the last action. Do the gesture by drawing a line straight up and back down.
	Copy the selected text. Do the gesture by drawing a line from left to right and back.
	Cut the selected text. Do the gesture by drawing a line from right to left and back.
	Paste copied or cut text. Do the gesture by drawing a line from the lower left of the screen diagonally up toward the right and back down to the right.
	Insert a tab. The horizontal portion of the gesture must be at least two times longer than the vertical portion.

Tip You can also use the **Enter**, **Space**, and **Backspace** buttons on the Transcriber toolbar.

The Transcriber toolbar

The Transcriber toolbar, which appears at the bottom of the screen when Transcriber is open, provides easy access to several tools, Enter, Space, and and Backspace buttons, and Left and Right arrow buttons.

Tap To

Open the **Options** dialog box, where you can set options such as writing direction, text entry, and shorthand.

Open **Letter Shapes**, where you can set your personal writing styles to maximize recognition.

Use the miniature keyboard to quickly enter numbers, punctuation, and other symbols.

Change the character recognition mode.

- **a** mode. This is the default for optimum handwriting recognition.
- **123** mode. Numbers and some letters are allowed and the calculator is activated.
- **A** mode. All letters are automatically capitalized.

If you are in A or 123 mode, recognition returns automatically to the default mode once you lift the stylus.

Insert a space at the cursor.

Insert a paragraph return at the cursor.

Move the cursor one space to the left.

Move the cursor one space to the right.

Move the cursor one space back and erase any text.

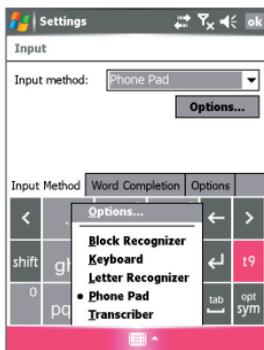

Open Transcriber Help.

2.7 Using Phone Pad

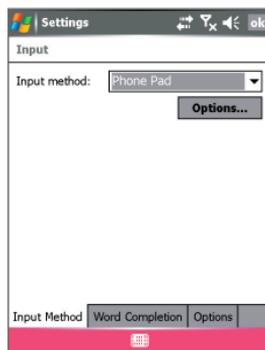

Phone Pad provides a flexible, alternate method for entering information. Using Phone Pad, you can easily switch between three input modes: T9, Multi-Tap, and Numeric, including a list of symbols for greater convenience.

Start Phone Pad

Phone Pad can be started at any time, except when your device is in Camera mode or displaying the Today screen.

Input Method Selection

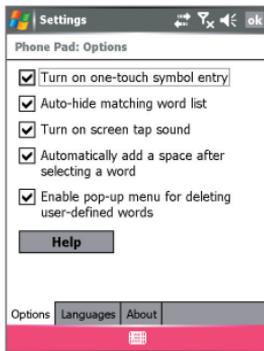

Phone Pad Settings

To start Phone Pad

- Tap the Input Selector arrow adjacent to the Input Panel at the bottom of the screen, and tap **Phone Pad**.

Following are the check boxes on the Options screen:

Phone Pad Options

- Turn on one-touch symbol entry. Select this check box to choose one symbol at a time.
- Auto-hide matching word list. Select this check box to hide the word list after you choose a word.
- Turn on screen tap sound. Select this check box to play a sound each time you tap a key.
- Automatically add a space after selecting a word. Select this check box to add a space automatically at the end of every word.
- Enable pop-up menu for deleting user-defined words. Select this check box to display a pop-up (shortcut) menu whenever you tap a word that is in the user database.

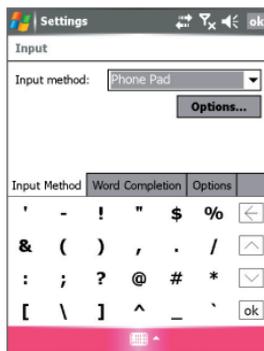

Note Tapping **Help** takes you to the Phone Pad Help topics.

To configure Phone Pad settings

1. Tap **Start > Settings > Personal tab > Input**.
2. In the **Input method** list, tap **Phone Pad**.
3. Tap **Options** and customise the settings.
4. Tap **OK**.

Symbol List

T9 Input Mode

Use T9 input mode

By default, the device Phone Pad is in T9 mode. It is the easiest and most convenient way to enter text in English because it has the capability to enter text in alphanumeric format. As you tap alphanumeric keys on the keypad, T9 tries to automatically match the letters you have selected with the most likely completed word.

You can do the following by using the T9 input mode:

- To enter a word, tap the keys on the keypad.
- To insert a word in the current programme screen:
 1. Tap any word in the word list (directly above the keypad).
 2. Tap .
 3. Select a word, and tap  to insert the word.
- To enter a number, do any of the following:

- Tap and hold on the desired number key on the keypad.
- Select the numeric mode, and tap the number.
- To insert a space or tab, tap .
- To scroll through the word list, tap  or .
- To enter a capital letter, tap .
- To add symbols, do any of the following:
 - Tap  to display the most frequently used symbols on the word list.
 - Tap  to choose a symbol from the entire list.

Use Multi-Tap input mode

Multi-Tap input mode is an alphabetic mode that allows you to manually enter individual letters to form words.

Use Numeric input mode

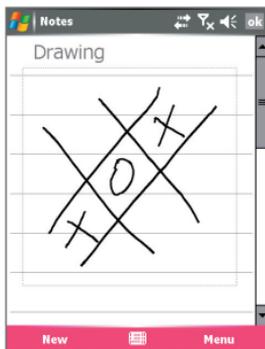

Numeric input mode allows you to enter a number each time you tap a number key. You can compile several numbers on the word list, and then tap  to insert the numbers at the current cursor position on the screen.

Use the Options screen

You can customise various behaviors for Phone Pad, including the language database on the Options screen. To access the Phone Pad Options screen, do any of the following:

- Tap and hold opt/sym on the keypad.
- Tap the Input Selector arrow at the bottom of the screen, and tap **Options**.
- On the Input Method tab of the Input screen, tap **Options**.

2.8 Drawing and Writing on the Screen

Drawing on the Screen

With your MDA Pro, you can draw directly on the screen, or write on the screen and save notes in your own handwriting. To do this, you must set the input mode in Notes to Writing. If you prefer to use handwriting or frequently add drawings to your notes, you may find it helpful to set Writing as the default input mode. If you prefer typed text, set Typing as the default input mode.

For more information on what you can do with Notes, see “Notes” in Chapter 7.

To set the input mode for Notes

1. Tap **Start > Programs > Organiser > Notes**.

Note You can also access Notes by tapping the **Organiser** icon from the quick launch panel on the Today screen.

2. In the note list, tap **Menu > Options**.
3. In the **Default mode** box, tap one of the following:
 - **Writing** if you want to draw or enter handwritten text in a note.
 - **Typing** if you want to create a typed note.
4. Tap **OK**.

To write a note

1. Tap **Start > Programs > Organiser > Notes**.
2. In the note list, tap **New**.

3. Write your text on the screen.
4. When finished, tap **OK** to return to the note list.

Notes To select handwritten text, tap and hold next to the writing. As soon as dots appear, and before they form a complete circle, quickly drag across the writing.

If a letter crosses three ruled lines, it is treated as a drawing rather than text.

To draw in a note

To draw on the screen, use the stylus like a pen.

1. Tap **Start > Programs > Organiser > Notes**.
2. In the note list, tap **New**.
3. Draw on the screen, crossing at least three ruled lines.
4. A selection box labeled Drawing appears around your drawing.
5. When finished, tap **OK** to return to the note list.

Note To select a drawing (for example, to copy or delete it), tap and hold the drawing briefly. When you lift the stylus, the drawing is selected.

2.9 Recording a Note

You can create a stand-alone recording (voice note) or you can add a recording to a note. For more information about creating, changing, or saving Notes, see "Notes" in Chapter 7.

To create a voice note

1. Tap **Start > Programs > Organiser > Notes**.

Note You can also access Notes by tapping the **Organiser** icon from the quick launch panel on the Today screen.

2. Do one of the following:
 - To create a stand-alone recording, record from the note list.
 - To add a recording to a note, create or open a note.
3. If you do not see the **Recording** toolbar, tap **Menu > View Recording Toolbar**.
4. Tap  to begin recording.
5. Hold your device's microphone near your mouth or other source of sound.
6. Tap  when finished recording.
7. If you are adding a recording to a note, tap **OK** to return to the note list when finished.
8. If you are recording in an open note, an icon will appear in the note.
9. If you are creating a stand-alone recording, the recording will appear in the note list.

Tip To quickly create a recording, press the **RECORD** button. When you hear the beep, begin your recording. Release the button when you are finished.

To change recording formats

1. Tap **Start > Settings > Personal tab > Input**.
2. Tap the **Options** tab, and in the **Voice recording format list**, tap the format you want.
3. Tap **OK**.

Note You can also change recording formats from within Notes. In the note list, tap **Menu > Options > Global Input Options** link (at the bottom of the page).

2.10 Searching Information

You can search for files and other items stored on your device in the My Documents folder or on a storage card. You can search by file name or by words located in the item. For example, you can search in e-mail messages, notes, appointments, contacts, and tasks, as well as in online Help.

To search for a file or an item

1. Tap **Start** > **Programs** > **Search**.
2. In **Search for**, enter the file name, word, or other information you want to search for.
3. If you have looked for this item before, tap the **Search for** arrow and select the item from the list.
4. In **Type**, select a data type to help narrow your search.
5. Tap **Search**.
6. The **My Documents** folder and subfolders are searched.
7. In the **Results** list, tap the item you want to open.

Note The storage card symbol  is displayed next to the names of files saved on a storage card.

Chapter 3

Using Phone Features

- 3.1 Using the Phone
- 3.2 Making a Voice Call
- 3.3 Receiving a Voice Call
- 3.4 Making a Video Call
- 3.5 Receiving a Video Call
- 3.6 Smart Dialing
- 3.7 In-call Options
- 3.8 Additional Dialing Information

3.1 Using the Phone

Like a standard mobile phone, you can use your device to make, receive, and keep track of calls and send SMS/MMS messages. You can also take notes while talking, dial directly from Contacts, and easily copy SIM contacts to Contacts on the device.

The Phone screen

From the Phone screen, you can access Call History, Speed Dial, and Phone settings. To open the Phone screen, do one of the following:

- Use the stylus and tap **Start > Phone**.
- On the Today screen, tap Phone icon ().
- Press TALK () on the device.
- Directly dial the phone number by pressing numeric keys on the hardware keyboard.

Enter your PIN

Most SIM cards are preset with a PIN (personal identification number) that is provided by your wireless service provider. You need to enter the PIN whenever you use your device.

1. Enter the preset PIN assigned by your wireless service provider.
2. Tap **Enter**.

Note If your PIN is entered incorrectly three times, the SIM card will be blocked. If this happens, you can unblock it with the PUK (PIN Unblocking Key) obtained from your wireless service provider.

Turn on and off flight mode

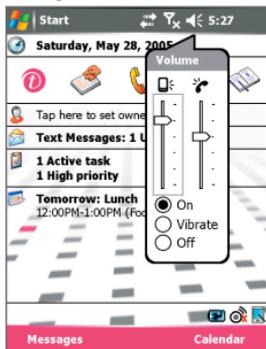

In many countries you are required by law to turn off your phone on-board an aircraft. Turning off the power doesn't turn off the phone. You must activate flight mode in order to turn off the phone.

You can turn on flight mode and still keep your device turned on and use other functions.

- Tap the Signal icon, and tap **Turn on flight mode** to turn off the phone.
- To resume call function, make flight mode unavailable by tapping **Turn off flight mode**.

Adjust the device volume

1. Tap the Speaker icon ().
2. Under Volume, do the following:
 - Adjust the phone volume () or device volume () by moving the slider to the desired volume level.
 - Tap **On, Vibrate**, or **Off** to change both the system and ringer volume settings.

Volume Adjustment

Notes To adjust the conversation phone volume, you must do it during a call. Adjusting the volume at another time will affect the ring, notification, and MP3 sound levels.

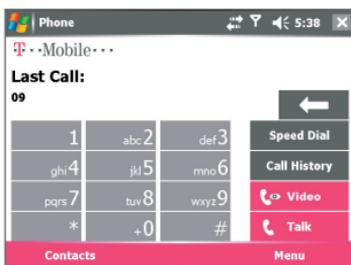

When you activate Vibrate mode, sound will automatically be muted and the device will vibrate when an incoming call is received. The Vibrate icon () will appear in the title bar to indicate that Vibrate mode is activated.

3.2 Making a Voice Call

With your device, you can make a call from Phone, Contacts, Speed Dial, Call History, and SIM Manager.

Make a call from Phone

- On the Phone keypad, tap the desired phone number, and tap **Talk** at the lower right of the screen.

Phone Screen

- Tip** If you tap a wrong number, tap the Back arrow () to erase individual numbers one at a time. To delete all the numbers, tap and hold the Back arrow.

Make a call from Contacts

- Tap **Start > Contacts**.

Notes You can also access Contacts by tapping the **Contacts** icon from the quick launch panel on the Today screen.

- Tap the desired contact, and press TALK twice (once to send the number to the Phone keypad, and once to dial the number).
- You can also tap the desired contact in the contacts list, and tap the phone number that you want to call. Or, tap and hold the desired contact, and on the shortcut menu, tap **Call Work**, **Call Home**, or **Call Mobile**.

To specify the number to dial

By default, the work telephone number (w) of a contact is dialed when you make a call from Contacts. However, you can specify that a different phone number is used instead.

1. Tap **Start > Contacts**.
2. Press NAVIGATION up or down to select the contact.
3. Press NAVIGATION left or right. The letters representing the number will change as you scroll through them.

Make a call from Call History

1. On the Phone keypad, tap **Call History**.
2. Tap **Menu > Filter** and tap a category.
3. Scroll to the desired contact or phone number, and tap **Call**.

Make a call from Speed Dial

Use Speed Dial to call frequently-used numbers with a single tap. For example, if you assign a contact to the location 2 in Speed Dial, you can simply tap and hold 2 on the Phone screen to dial the contact's number. Before you can create a Speed Dial entry, the number must already exist in Contacts.

To create a Speed Dial entry

1. On the Phone keypad, tap **Speed Dial**.
2. Tap **Menu > New**.
3. Tap a contact. Tap the phone number for which you want to create a Speed Dial.
4. In the **Location** box, select an available location for the new Speed Dial.

Note Location 1 is generally reserved for your voice mail, and Speed Dial will designate the next available location by default. If you want to place a number in a position that is already occupied, the new number will replace the number that is already there.

Tips To create a Speed Dial entry from Contacts, tap and hold the contact name, tap **Add to Speed Dial**, and select an available location for the new Speed Dial.

To delete a Speed Dial, in the Speed Dial list, tap and hold the desired entry, and tap **Delete**.

To make a call from SIM Manager

SIM Manager allows you to view the contents of your SIM card, transfer SIM phonebook entries to Contacts on your device, and make a call from your SIM card.

1. Tap **Start > Contacts > SIM Manager**. Wait for your SIM card contents to load.
2. Tap and hold the name or phone number of the person you want to call, and tap **Call**.

Note you can also access SIM Manager by tapping the **Contacts** icon from the quick launch panel on the Today screen.

3.3 Receiving a Voice Call

To answer or reject an incoming call

When you receive a phone call, a message will appear, giving you the option to either answer or ignore the incoming call.

- To answer the call, tap **Answer**, or press TALK () on your device.
- To reject the call, tap **Ignore**, or press END () on your device.

To end a call

Once an incoming or outgoing call is in progress, you can press END on your device, or tap **End** to hang up.

3.4 Making a Video Call

Your device features innovative Video Telephony technology, which lets you make a call with live images.

To make a video call

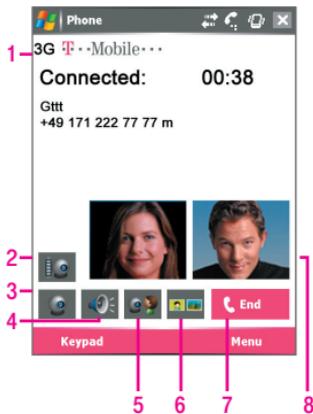

- On the Phone keypad, tap  **Video**.
- From Contacts, tap and hold the desired contact, and tap **Video Call**.
- From Call History, tap and hold the desired contact, and tap **Video Call**.
- In Inbox, the embedded phone number in the SMS message will be highlighted, so that you can press the **Video Call** key () to make a video call.

Note The caller's image will appear on the screen after about 3 to 5 seconds after connection, depending on the signal strength. The streaming images quality may also be influenced by the signal.

Change Video Call settings

You can change some settings to optimize the performance of Video Call and meet your needs, including adjusting the camera's brightness, switching the active camera between two cameras, swapping the image size, and mute the video/audio.

The figure below illustrates the Video Call screen and control buttons during an active video call.

- 1 Status Area. Displays the status, the caller's information and call timer.
- 2 Brightness Control button. Tap to adjust the camera's brightness.
- 3 Video Mute button. Tap to mute/unmute video.
- 4 Audio Mute button. Tap to mute/unmute audio.
- 5 Camera Switch button. Tap to switch the active camera between the inner and outer camera.
- 6 View Mode button. Tap to swap the image size.
- 7 End button. Tap to end the video call.
- 8 View Image Area. Displays the caller's and your images.

To swap the image size

Video Call supports four view modes to display the caller's and your images. To swap the image size, tap the View Mode button repeatedly to select the view mode you want.

Standard video mode – both the caller's and your images are the same size.

Received video only – only the caller's image is displayed.

Received video large – the caller's image is large, and your image is small.

My video large – your image is large, and the caller's image is small.

To set up Video Call

- On the Phone screen, or on the screen of the active video call, tap **Menu** > **Video Call Options**.
- On the **General** tab, do one of the following:
 - Mute video setting.** This option allows you to define a display option when you mute the video during a video call.
 - Pre-defined female image** displays a default female picture that is provided by the T-Mobile.
 - Pre-defined male image** displays a default male picture that is provided by the T-Mobile.
 - Set user-defined still image** defines a still image to be displayed. When this option is selected, the File Name box and a Browse button will be enabled, allowing you to select a picture that is stored on your device.
 - Blocking video** continues sending the last frame instead of the live video stream.
 - View mode setting.** In this option, various view modes can be selected, including Standard video mode, Received video only, Received video large, and My video large.
 - Select the **Show call timer** check box to display the call period in the status area.
 - Select the **Show phone number and name** check box to display the caller's phone number and name in the status area.

- Select the **Mirror self camera** check box, and your image displayed on your device will look like a reflected image in a mirror.
3. To set up the further calling options for Video Call, tap the Services tab. Then, select the desired service from the list, and tap **Get Settings** to access the settings.

Video Call, Services

Video Call, General

Note It is possible that you receive a video call while you are running some other programs on your device. To answer the video call and maintain its audio and video quality, you might need to quit some of the running programs on your device that cannot coexist with a video call due to system resource competition. Some of these programs are Internet Explorer, Windows Media Player, and Messaging. However, the video call feature on your device prompts you with a message to quit such programs before you answer the call.

3.5 Receiving a Video Call

To answer or reject an incoming video call

When you receive a video call, the LED on the device will blink green and orange alternately, and a ringtone will be played. Then, the caller's assigned picture will appear on the screen, as well as the caller's name, phone number, and company (if available).

- To answer the video call, tap **Answer**, or press the **Video Call** button.
- To reject the video call, tap **Ignore**, or press END on your device.

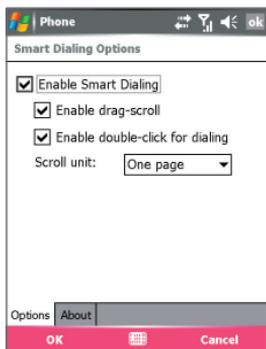

To end a video call

Once an incoming or outgoing video call is in progress, you can press END on your device, or tap End to hang up.

3.6 Smart Dialing

Smart Dialing is a programme that makes it easy for you to dial a phone number. When you start entering numbers, Smart Dialing will automatically search and sort the contact entries on the SIM card, in Contacts, and the phone numbers in Call History (including incoming, outgoing, and missed calls). Then, you can select the desired number or contact from the filtered list to dial.

To set up Smart Dialing

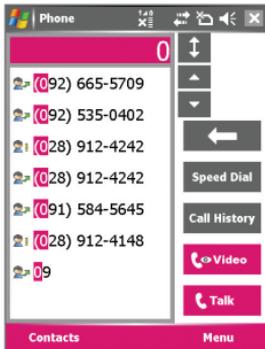

Smart Dialing, Options

1. Open Phone, and tap **Menu > Smart Dialing Options**.
2. On the **Options** tab, select the **Enable Smart Dialing** check box.
 - Select the **Enable drag-scroll** check box to scroll in the matched list by dragging.
 - Select the **Enable double-click** for dialing check box to make a call by double-clicking the item in the matched list.
 - In **Scroll unit**, you can set up the scrolling options when pressing NAVIGATION up or down.

Use Smart Dialing

Open Phone and tap the first digit of the number you want to dial, and the Smart Dialing panel will appear. You can size the panel according to your need by tapping .

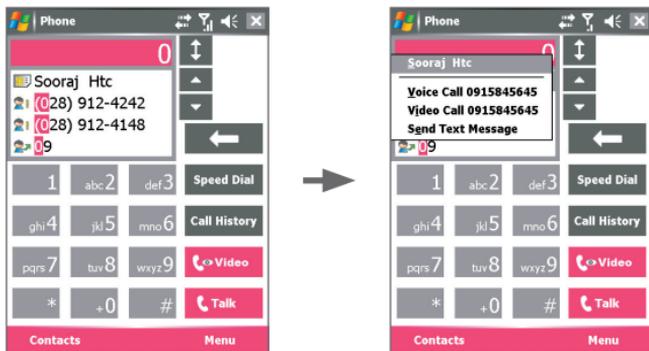

Enlarged Panel

Smart Dialing starts looking for numbers that match the sequence you have entered. Each time you tap an additional digit or delete a digit, the search is renewed and the result is re-displayed. The list may include phone numbers and/or contact names associated with matching number sequences.

To make a call or send a text message using Smart Dialing

1. Begin entering the first few numbers.
2. In the Smart Dialing panel, browse the list by tapping the arrows ( ) or pressing NAVIGATION up or down, to select the desired contact or phone number.
3. The highlighted item will move one line when you press NAVIGATION up or down; the highlighted item will scroll one page when you tap the arrows.
4. Do one of the following:
 - When the correct contact is selected, tap **Talk**.

- To call a different phone number associated with the selected contact, tap and hold the selected contact, and tap the phone number you want to call.

Tap and hold the contact to pop up the shortcut menu

- To send a text message to the selected contact, tap and hold the contact, and tap **Send Text Message**.

Tip To view or edit information associated with the selected contact, tap the contact's name on the shortcut menu (applies only to entries stored in Contacts on your device).

3.7 In-call Options

To put a call on hold

Your device notifies you when you have another incoming call, and gives you the choice of rejecting or accepting the call. If you are already on a call and accept the new call, you can choose to switch between the two callers, or set up a conference call between all three parties.

1. Tap **Answer** to take the second call, and put the first one on hold.
2. To end the second call and return to the first call, tap **End** or press END on your device.

To switch between two calls

- Tap **Swap**.

To set up a conference call

1. Either put a call on hold, and dial a second number; or, accept a second incoming call when you already have one in progress.
2. Tap **Conference**.

Tips If the conference connection is successful, the word "Conference" will appear at the top of the screen.

To add additional persons to your conference call, tap Hold, enter the phone number, and then tap Resume to return and continue.

Note Not all service providers support conference calling. Contact your service provider for details.

To turn on and off the Speakerphone

The built-in Speakerphone on your device allows you to talk hands-free or lets other people listen to the conversation.

- During a call, press and hold TALK until the Speakerphone turns on, and the  icon appears in the title bar.
- To turn off the Speakerphone, press and hold TALK again until the Speakerphone turns off.

Warning! To avoid damage to your hearing, do not hold your device against your ear when the Speakerphone is turned on.

To mute a call

You can turn off the microphone during a call, so that you can hear the caller but the caller cannot hear you.

- During a call, tap **Mute**.
- When the microphone is turned off, the  icon appears on the screen. Tap **Unmute** to turn on the microphone again.

3.8 Additional Dialing Information

Make an emergency call

- Enter the international emergency number for your locale, and tap **Talk**.

Tip Additional emergency numbers may be included in your SIM card. Contact your service provider for details.

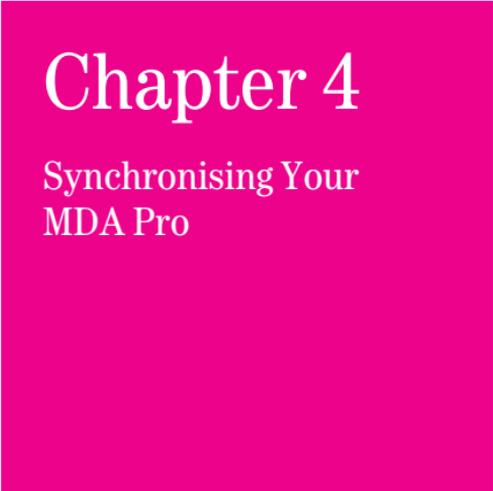

Make an international call

1. Tap and hold **0** on the Phone keypad until the **+** sign appears. The **+** replaces the international prefix of the country that you are calling.
2. Enter the full phone number you want to dial, and tap **Talk**. The full phone number includes country code, area code (without the leading zero, if any) and phone number.

Using SIM Tool Kit (STK)

A SIM card must be inserted in your device in order to use this feature, which allows you to access a range of information services provided by T-Mobile.

1. Tap **Start > Programs > STK**.
A list of provided services appears.
2. To access a service, tap the item in the list.

Chapter 4

Synchronising Your MDA Pro

- 4.1 Using ActiveSync
- 4.2 Synchronising Information
- 4.3 Synchronising via Infrared and Bluetooth
- 4.4 Synchronising Music, Video, and Pictures

4.1 Using ActiveSync

ActiveSync synchronises information on your device with information on your PC, such as Outlook content. ActiveSync can also synchronise over a wireless or cellular network with Microsoft Exchange Server, if your company or service provider is running Microsoft Exchange Server with Exchange ActiveSync. When you synchronise, ActiveSync compares the information on your device with the information on your PC and/or Exchange Server and updates all locations with the most recent information.

With ActiveSync, you can:

- Synchronise information, such as Outlook E-mail, Contacts, Calendar, or Tasks information on your device with your PC, as well as pictures, video, and music.
- Synchronise Outlook E-mail, Contacts, Calendar appointments, and Tasks on your device directly with Exchange Server so that you can stay up to date even when your PC is turned off.
- Exchange files between your device and your PC without synchronising.
- Select which types of information are synchronised and specify how much information is synchronised. For example, you can choose how many weeks of past Calendar appointments to synchronise.

Before you can synchronise information with a PC, you must first install ActiveSync on your PC and create a synchronisation relationship between your device and the PC. You can install ActiveSync from the Getting Started disc that comes with your device. ActiveSync is already installed on your device. Once you have installed ActiveSync and set up a synchronisation relationship, ActiveSync on the PC recognizes your device when you connect it, and automatically transfers the synchronisation settings you specified on your device. You may be able to synchronise your device with Exchange Server through your company or wireless service provider. If you plan to do so, obtain the name of the Exchange Server, your user name, password, and domain name from your administrator before starting the Sync Setup Wizard.

To install and set up ActiveSync

1. Install ActiveSync on your PC, as described on the Getting Started disc.
After Setup completes, the Sync Setup Wizard automatically starts when you connect your device to the PC.
2. Follow the instructions on the screen to complete the wizard. In the Sync Setup Wizard, do one or both of the following:
 - Create a synchronisation relationship between your PC and the device.
 - Configure an Exchange Server connection to synchronise directly with Exchange Server.
3. Choose information types to synchronise.

Note When you finish the wizard, ActiveSync synchronises your device automatically. Once synchronisation completes, you can disconnect your device from your PC.

4.2 Synchronising Information

When you connect your device to the PC using a USB or serial cable, an infrared connection, or a Bluetooth connection, ActiveSync will immediately synchronise. While the device is connected, ActiveSync synchronises every time you make a change on either the PC or the device.

Synchronising Outlook information

If you have set up a synchronisation relationship between your device and the PC, synchronisation keeps Outlook information up-to-date on both computers. ActiveSync synchronises a limited amount of information by default to save storage space on your device. You can change the amount of information synchronised for a given information type in Settings for the information type. You can set up your device to synchronise with more than one PC or with a combination of one or more PCs and Exchange Server. When synchronising with multiple computers, the items that you synchronise will appear on all of the computers with which they are synchronised. For example, if you have set up synchronisation with two PCs (PC1 and PC2), which have different items, and you synchronise Contacts and Calendar on the device with both computers, the result is as follows:

Location	New state
PC1	All Outlook contacts and calendar appointments that were on PC2 are now also on PC1.
PC2	All Outlook contacts and calendar appointments that were on PC1 are now also on PC2.
Device	All Outlook contacts and calendar appointments from both PC1 and PC2 are on the device.

Note Outlook e-mail can be synchronised with only one computer.

To start and stop synchronisation

- To synchronise Outlook information and other local information on the PC, including media files, connect your device to the PC using Bluetooth, infrared (IR) or a cable or cradle.
- If you are synchronising directly with Exchange Server, you can use this connection to the PC to "pass through" to the network, or you can synchronise without connecting to the PC over a cellular or Wi-Fi network.
- In ActiveSync, tap **Sync**.
 - To end synchronisation before it completes, tap **Stop**.

To change which information is synchronised

1. In ActiveSync on the device, tap **Menu > Options**.
2. Do one or both of the following:
 - Select the check box for any items you want to synchronise. If you cannot select a check box, you might have to clear the check box for the same information type elsewhere in the list.
 - Clear the check box for any items you want to stop synchronising.
3. To stop synchronising with one PC completely, tap the PC and tap **Delete**.

Notes Outlook e-mail can be synchronised with only one computer.

To change available synchronisation settings, select the type of information and tap **Settings**.

To synchronise directly with Exchange Server

You can set up synchronisation with Exchange Server on your device, if it is available to you through your company or wireless service provider. However, you should first ask your administrator for the following information and then carry on with the steps: Exchange Server name, your user name, password, and domain name.

1. In ActiveSync on the device, tap **Menu > Configure Server**. If you have not yet set up synchronisation with Exchange Server, this will say **Add Server Source**.
2. In **Server address**, enter the name of the server running Exchange Server, and tap **Next**.
3. Enter your user name, password, and domain, and tap **Next**.
 - To change the rules for resolving synchronisation conflicts, tap **Advanced**.
4. Select the check boxes for the types of information items that you want to synchronise with Exchange Server.
5. To change available synchronisation settings, select the type of information, and tap **Settings**.
6. Tap **Finish**.

4.3 Synchronising via Infrared and Bluetooth

You can connect your device to the PC to synchronise using the local wireless technologies, such as infrared (IR) and Bluetooth. These technologies have almost similar but slightly differing requirements.

To synchronise with a PC via infrared

1. Follow the instructions in ActiveSync Help on the PC for setting up your PC to receive infrared beams.
2. Line up the infrared (IR) ports according to the instructions in the manufacturer's documentation for your device so that they are unobstructed and within close range.
3. On the device, tap **Start > Programs > ActiveSync**.
4. Tap **Menu > Connect via IR**.
5. Tap **Sync**.

To synchronise with a PC via Bluetooth

1. Follow the instructions in ActiveSync Help on the PC for configuring Bluetooth on your PC to support ActiveSync.
2. On the device, tap **Start > Programs > ActiveSync**.
3. Tap **Menu > Connect via Bluetooth**. Make sure that Bluetooth is turned on at the device and the PC, and that they are within close range.
4. If this is the first time you have connected to this PC via Bluetooth, you must first complete the Bluetooth wizard on the device and set up a Bluetooth partnership between your device and the PC.

For more information about enabling and configuring Bluetooth, see Chapter 6.

Note You can also use the Sync Setup Wizard to set up the device to synchronise remotely with Exchange Server. This wizard is started when you connect your mobile device to your PC after installing ActiveSync on the PC.

4.4 Synchronising Music, Video, and Pictures

If you want to carry your music or other digital media with you along while you travel, ActiveSync works with Windows Media Player to synchronise music, video, and pictures with your device.

Other than selecting the Media information type in ActiveSync to be synchronised, all media synchronisation settings must be set in Windows Media Player. Before media can be synchronised, you must do the following:

- Install Windows Media Player Version 10 on the PC.
- Connect your device to the PC with a USB cable. If the device is currently connected using Bluetooth or infrared, you must end that connection before media can be synchronised.
- Insert a 32-MB or larger storage card into your device.
- Set up a sync partnership between the storage card and Windows Media Player.

Change Media synchronisation settings

Once you select the Media information type in ActiveSync to be synchronised, any of your favourite music, video, and picture files in Windows Media Player playlists can be synchronised. All you have to do is set up synchronisation in Windows Media Player for those media files.

To set up a sync relationship with a storage card

1. Open Windows Media Player.
2. Click the **Sync** tab.
3. Select the storage card.
4. Click **Set up Sync**.

For information about using Windows Media Player on the device, see Chapter 8.

Chapter 5

Managing Your MDA Pro

- 5.1 Personalising Your MDA Pro
- 5.2 Adding and Removing Programmes
- 5.3 Managing Memory
- 5.4 Backing Up Files
- 5.5 Protecting Your Device
- 5.6 Resetting Your MDA Pro

5.1 Personalising Your MDA Pro

Today screen settings

To customise the Today screen

1. Tap **Start > Settings > Personal tab > Today**.
2. On the **Appearance** tab, select the desired theme for the background of the Today screen.
3. On the **Items** tab, select the items you want to appear on the Today screen.

Tip To change the order of items displayed on the Today screen, tap the item, and tap **Move Up** or **Move Down**.

To add a custom background image

You can use one of your own pictures as the background image on the Today screen. Be aware that pictures can affect the readability of text on the Today screen.

1. Tap **Start > Settings > Personal tab > Today**.
2. Select the **Use this picture as the background** check box, and tap **Browse** to view a list of your picture files.
3. Tap the file name of the picture you want to use.
4. Tap **OK**.

To set options for displaying appointments on the Today screen

If you have a large number of appointments, you may want to specify the kind of appointments that are displayed on the Today screen.

1. Tap **Start > Settings > Personal tab > Today**.
2. Tap the **Items** tab.
3. Select **Calendar** and tap **Options**.
4. Do any of the following:
 - Select **Next appointment** to show only the next appointment in your schedule, or **Upcoming appointments** to show multiple appointments.
 - Clear the **Display all day events** check box if you do not want to display all-day events.

To set options for displaying tasks on the Today screen

If you have a large number of tasks, you may want to specify the kind of tasks that are displayed on the Today screen.

1. Tap **Start > Settings > Personal** tab > **Today**.
2. Tap the **Items** tab.
3. Select **Tasks** and tap **Options**.
4. Do any of the following:
 - Under **Display number of**, select the type of tasks you want to appear on the Today screen.
 - In the **Category** list, select whether to display only tasks assigned to a specific category or to display all tasks.

Customise the Start menu

You can choose which items appear in the **Start** menu.

1. Tap **Start > Settings > Personal** tab > **Menus**.
2. Select the check boxes of the items you want to appear in the **Start** menu.

You can select up to seven items.

Tip You can also create folders and shortcuts to appear on the **Start** menu. In ActiveSync on your PC, click **Explore**. Double-click **My Windows Mobile-Based Device**, click **Windows**, click **Start Menu**, and then create the folders and shortcuts that you want. You will see the added items after you synchronize.

Set Date / Time / Language / Regional Options

To set the time and date

1. Tap **Start > Settings > System** tab > **Clock & Alarms**.
2. Select the correct time zone and change the date or time.

Note During synchronization, the time on your device is updated with the time on your PC.

To set an alarm

1. Tap **Start > Settings > System tab > Clock & Alarms > Alarms** tab.
2. Tap **<Description>** and enter a name for the alarm.
3. Tap the day of the week for the alarm. You can select multiple days by tapping each desired day.
4. Tap the time to open a clock and set the time for the alarm.
5. Tap  to specify the type of alarm you want. You can choose a flashing light, a single sound, a repeating sound, or vibration.
6. If you choose to play a sound, tap the list next to the **Play sound** check box and tap the sound you want.

To set the time and date for a different location

If you visit or communicate with someone in a particular time zone often, you can select it as your visiting time zone.

1. Tap **Start > Settings > System tab > Clock & Alarms**.
2. Tap **Visiting**.
3. Select the correct time zone and change the time or date.

To change language and regional settings

The style in which numbers, currency, dates, and times are displayed is specified in regional settings.

1. Tap **Start > Settings > System tab > Regional Settings**.
2. On the **Region** tab, select your region and language.
3. The region you select determines which options will be available on the other tabs.
4. To customise settings further, tap the appropriate tabs and select the desired options.

Personal and system settings

To reassign programmes or shortcuts to programme buttons

Your device may come with programmes already assigned to hardware buttons. You can customise these buttons to open the programmes you use most, or to perform certain shortcuts such as changing the screen orientation, opening the Today screen, or opening Input Panel.

1. Tap **Start > Settings > Personal tab > Buttons**.
2. A list of buttons and their current assignments is displayed on the **Program Buttons** tab.
3. Tap the button you want to reassign. To help you identify the buttons, there are numbers and icons representing the original function of the button.
4. In the **Assign a program** box, tap the programme or shortcut you want to assign.
5. Tap **OK**.

To increase or decrease the size of text on the screen

1. Tap **Start > Settings > System tab > Screen > Text Size** tab.
2. Move the slider to increase or decrease the text size.

To enter owner information

Entering and displaying owner information are best practices; they allow someone to return the device to you in case it is lost.

1. Tap **Start > Settings > Personal tab > Owner Information**.
2. On the **Identification** tab, enter your personal information.

Tip If owner information is displayed on the Today screen, you can open and edit the information directly from the Today screen. Just tap that section of the screen.

To choose how to be notified about events or actions

1. Tap **Start > Settings > Personal tab > Sounds & Notifications**.
2. On the **Sounds** tab, choose how you want to be notified by selecting the appropriate check boxes.
3. On the **Notifications** tab, in **Event**, tap an event name and choose how you want to be notified by selecting the appropriate check boxes. You can choose from several options, such as a special sound, a message, or a flashing light.

Tip Turning off sounds and the flash light helps conserve battery power.

To adjust the volume for sounds

You can change the volume for sounds, such as the sound you hear when you tap programme names and menu options.

1. Tap .
2. Under , move the system volume slider to the desired volume level.
3. Tap **On**, **Vibrate**, or **Off** to quickly change both the system and ringer volume settings.

Tip You can also press the volume control on your device to quickly change both the ringer and system volume settings.

To adjust the speed for scrolling

Pressing and holding NAVIGATION up or down (Up/Down control) scrolls through the items in a list.

1. Tap **Start** > **Settings** > **Personal** tab > **Buttons** > **Up/Down Control** tab.
2. Do one of the following:
 - Under **Delay before first repeat**, move the slider to shorten or lengthen the time that elapses before scrolling begins.
 - To change the time it takes to scroll from one item to the next, under **Repeat rate**, move the slider to adjust the speed.

To find the operating system version number

- Tap **Start** > **Settings** > **System** tab > **About**.

The version of the operating system on your device will be listed near the top of the screen.

To get detailed device information

- Tap **Start** > **Settings** > **System** tab > **About**.

The **Version** tab displays important device information, including the type of processor and the amount of memory that is installed.

To change the device name

1. Tap **Start > Settings > System tab > About**.
2. Tap the **Device ID** tab.
3. Enter a name.

The device name must begin with a letter, consist of letters from A to Z, numbers from 0 to 9, and cannot contain spaces. Use the underscore character to separate words.

Why is the device name important?

The device name is used to identify the device in the following situations:

- Synchronizing with a PC
- Connecting to a network
- Restoring information from a backup

Note If you synchronise multiple devices with the same PC, each device must have a unique name.

To make the battery last longer

The device battery power lasts based on the battery type and how you use your device. Try the following to help preserve battery life:

- Tap **Start > Settings > System tab > Power**. On the **Advanced** tab, you can specify when your device turns off to conserve battery power. For optimum conservation, specify 3 minutes or less.
- Use the AC adapter to plug your device into external power whenever possible, especially when using a SD card or when using a modem or other peripherals.
- Adjust the backlight settings.

To adjust the brightness of the backlight

1. Tap **Start > Settings > System tab > Backlight > Brightness** tab.
2. Move the sliders right to increase and left to decrease the brightness.

To set the backlight to dim after a time delay

1. Tap **Start > Settings > System tab > Backlight**.
2. Tap the **Battery Power** tab or the **External Power** tab.
3. Select the **Turn off backlight if device is not used for** check box, and specify the time delay.

Phone settings

You can customise phone settings, such as the ring type and ring tone to be used for incoming calls, and the keypad tone to be used when entering phone numbers.

To change the ring tone

1. From the Phone keypad, tap **Menu > Options > Phone** tab.
2. In the **Ring tone** list, tap the sound you want to use.

Tip To use custom .wav, .mid, or .wma files as ring tones, use ActiveSync on your PC to copy the file to the /Windows/Rings folder on your device. Then, select the sound from the Ring tone list. For more information about copying files to your device, see [ActiveSync Help on your PC](#).

To change the ring type

You can change the way that you are notified of incoming calls. For example, you can choose to be notified by a ring, a vibration, or a combination of both.

1. From the Phone keypad, tap **Menu > Options > Phone** tab.
2. In the **Ring type** list, tap the desired option.

To change the keypad tone

You can change the tone you hear when entering a phone number on the keypad. If set to Long tones, the tone is heard continuously for as long as the number on the keypad is pressed. Use this setting if you are having trouble accomplishing tasks that rely on tones from your phone such as accessing

messages from an answering machine. If set to Short tones, the tone is heard only for one or two seconds. If set to Off, no tone will be heard.

1. From the Phone keypad, tap **Menu > Options > Phone** tab.
2. In the **Keypad** list, tap the option you want.

Phone services

Services, such as Call Waiting enable you to choose how to handle all incoming calls on your device.

To display Caller ID, block calls, use Call Waiting, or use Call Forwarding

1. Tap **Start > Settings > Phone > Services** tab.
2. Tap the service you want to use and tap **Get Settings**.

Networks

You can view available wireless networks, determine the order in which your device accesses another network if the current one is unavailable, and specify whether you want to change networks manually or automatically. For more information about network settings, see Help on your device.

To change phone network settings

- Tap **Start > Settings > Phone > Network** tab.

By default, your device displays the current network as offered by your service provider. However, you can customise to set your preferred network.

To set preferred networks

1. Tap **Set Networks** on the **Network** tab.
2. Select the networks on the **Phone: Preferred networks** screen and sort them according to your preference.
3. Tap **OK**.

By default, **Network selection** field is set to **Automatic**. However, you can set it to **Manual** to choose your own network at any point of time.

Bands

Your device uses radio waves to transmit your conversations. These radio waves can be at different frequencies, called bands. This works almost the same way as regular radio stations broadcast their programmes at different frequencies. Typically, your device uses frequencies within four different frequency bands, such as 900 MHz, 1800 MHz, and 1900 MHz.

To customise the default band type

1. On the **Band** tab, select the network type.
2. Select the band you prefer.
3. Tap **OK**.

Ideally, you would want a phone that can work on all four bands – commonly called a quad-band phone. However, your device supports triband capabilities. The **More** tab on the Phone Settings screen provides you options to pick up your calls automatically after three rings. The **Broadcast Channels** option allows you to receive and listen to radio channels available on a particular frequency.

5.2 Adding and Removing Programmes

Before you purchase additional programmes for your device, you should note the name of your device, the version of Windows Mobile software running on it, and the type of processor. This information will help you select a programme that is compatible with your device. For more information, see "To get detailed device information" and "To find the operating system version number" in this chapter. Programmes available for purchase usually include a Setup programme (commonly named "setup.exe") that you must first install on your PC. You can then use ActiveSync to add programmes to your device, or add a programme directly from the Internet.

To add programmes

1. Download the programme to your PC (or insert the CD or disk that contains the programme into your PC). You may see a single *.exe file, a *.zip file, a Setup.exe file, or several versions of files for different device types and processors. Be sure to select a programme designed for your device and processor type.
2. Read any installation instructions or documentation that comes with the programme. Many programmes provide special installation instructions.
3. Connect your device and PC.
4. Double-click the *.exe file.
 - If the executable file is an installation wizard, follow the instructions on the screen. Once the programme has been installed on your PC, the wizard will automatically transfer the programme to your device.
 - If an installation wizard does not start, you will see an error message stating that the programme is valid but that it is designed for a different type of computer. You will need to copy this programme to your device. If you cannot find any installation instructions for the programme, use ActiveSync to copy the programme file to the Program Files folder on your device.

To remove programmes

You can only remove programmes that you installed. Programmes that come with your device cannot be removed.

1. Tap **Start > Settings > System tab > Remove Programs**.
2. In the **Programs in storage memory** list, select the programme you want to remove, and tap **Remove**.
3. Tap **Yes**. If another confirmation message appears, tap **Yes** again.

5.3 Managing Memory

To see how much memory is available

- Tap **Start > Settings > System tab > Memory**.

On the **Main** tab, the amount of memory allocated to file and data storage versus programme storage is displayed, as well as the amount of memory in use versus the available memory.

To see available storage card memory

You can see how much memory is available on a storage card that is inserted in your device.

1. Tap **Start > Settings > System tab > Memory**.
2. Tap the **Storage Card** tab.

Tip If you have more than one card inserted, tap the list box and then the storage card whose information you want to see.

To free up programme memory

Try the following to free memory on your device:

- Close programmes you are not currently using.
- Move e-mail attachments to a storage card.
- Move files to a storage card. Tap **Start > Programs > File Explorer**. Tap and hold the file, and tap **Cut**. Browse to the storage card folder and tap **Edit > Paste**.
- Delete unnecessary files. Tap **Start > Programs > File Explorer**. Tap and hold the file, and tap **Delete**.
- Delete large files. To find your largest files, tap **Start > Programs > Search**. In the **Type** list, tap **Larger than 64 KB**, and tap **Search**.
- In Internet Explorer Mobile, delete temporary Internet files and clear history information. For more information, see "Internet Explorer Mobile" in Chapter 6.
- Remove programmes you no longer use.
- Reset your device.

To close a programme

In most cases, programmes automatically close to free needed memory, however, you can close programmes manually, if you prefer.

1. Tap **Start** > **Settings** > **System** tab > **Memory** > **Running Programs** tab.
2. In the **Running Programs** list, tap the programme you want to close, and tap **Stop**.

Tip In most programmes, you can also use the keyboard shortcut CTRL+Q to close the programme.

5.4 Backing Up Files

You can back up files to your PC using ActiveSync, or copy files to a storage card you insert into your device. Your device has an expansion slot compatible with a range of secure digital (SD) and multimedia (MMC) storage cards.

Using ActiveSync, you can copy or move information from the PC to the device and vice versa. Changes you make to the information on one computer will not affect the information on the other computer. If you want to automatically update information on both your device and PC, synchronize the information instead. For more information about copying and synchronizing files, see ActiveSync Help on your PC.

To copy files to a storage card

1. Push the storage card into the storage card slot until it clicks into place. The card is secure when it does not protrude from the base.
2. Tap **Start > Programs > File Explorer** and navigate to the appropriate folder.
3. Tap and hold the file you want to copy, and tap **Copy**.
4. Tap the folder list (labeled **My Documents** by default) and tap **Storage Card**.
5. Tap **Menu > Edit > Paste**.

To copy a file using ActiveSync

Copying a file results in separate versions of a file on your device and PC.

Because the files are not synchronized, changes made to one file will not affect the other.

1. Connect your device to your PC.
2. In ActiveSync, click **Explore**, which opens the Mobile Device folder for your device.
3. In the Mobile Device folder, go to the file that you want to copy on your device or PC.
4. Do one of the following:
 - To copy the file to your device, right-click the file, and click **Copy**. Right-click the desired folder under Mobile Device, and click **Paste**.
 - To copy the file to your PC, right-click the file and click **Copy**. Right-click the desired folder on your PC, and click **Paste**.

To automatically save files on a storage card

In the Word Mobile, Excel Mobile, and Notes programmes, you may find it helpful to save all new documents, notes, and workbooks directly on a storage card.

1. From the programme file list, tap **Menu > Options**.
2. With a storage card inserted in the device, in the **Save to** box, tap the appropriate storage card to automatically save new items on the storage card.
3. Tap **OK**.

Note In the file or note list, a storage card symbol is displayed next to the names of files saved on a storage card.

5.5 Protecting Your Device

There are two kinds of security on your device. You can protect your phone from unauthorised use by assigning a type of password called a PIN (personal identification number). Additionally, you can prevent unauthorised access to any part of the device by using password protection.

Your first PIN will be given to you by your wireless service provider; you can change the PIN later.

You create your own password when you begin using your device.

To protect your phone with a PIN

1. From the Phone keypad, tap **Menu** > **Options** > **Phone** tab.
 2. Tap **Require PIN when phone is used**.
- To change the PIN at any time, tap **Change PIN**.

Tip Emergency calls can be placed at any time, without requiring a PIN.

To protect your device with a password

You can help keep your data more secure by requiring a password every time the device is turned on.

1. Tap **Start** > **Settings** > **Personal** tab > **Password**.
2. Select the **Prompt if device unused for** check box, and in the box to the right, select how long your device must be turned off before a password is required. In the **Password type** box, select the type of password you would like to use. Enter the password and, if necessary, confirm the password.
If your device is configured to connect to a network, use a strong password to help protect network security.
3. On the **Hint** tab, enter a phrase that will help you remember your password, but doesn't allow others to guess your password.
The hint will be displayed after the wrong password is entered four times.
4. Tap **OK**.
The next time the device is turned on, you will be prompted to enter your password.

Notes Each time a wrong password is entered, the time the device takes to respond will get longer and longer until the device appears to be not responding.

If you forget your password, you must follow the instructions in your owner's manual to clear memory before you can access your device.

To change your password

1. Tap **Start > Settings > Personal tab > Password**. You will be prompted to enter your current password.
2. In the **Password** box, enter your new password.
3. On the **Hint** tab, enter a phrase that will help you remember your new password, but doesn't allow others to guess your password.
The hint will be displayed after the wrong password is entered four times.
4. Tap **OK**.

To display owner information on the Today screen

Having your contact information displayed on the Today screen on startup allows for easy identification of the device in case it is lost.

1. Tap **Start > Settings > Personal tab > Owner Information**.
2. On the **Options** tab, select the **Identification information** check box.
3. On the **Options** tab, select the **Notes** check box if you want additional text displayed, such as: Reward if found.
4. On the **Notes** tab, enter the additional text.

Tip To display owner information on the Today screen, tap **Start > Settings > Personal tab > Today**. On the **Items** tab, select the **Owner Info** check box.

5.6 Resetting Your MDA Pro

Occasionally you may need to reset your MDA Pro. A normal (or soft) reset of your device clears all active programme memory and shuts down all active programmes. This can be useful when the device is running slower than normal, or a programme is not performing properly. A soft reset is also necessary after the installation of some programmes. If a soft reset is performed when programmes are running, unsaved work will be lost.

You can also perform a hard reset (also known as a full reset). A hard reset should be performed only if a normal reset does not solve a system problem. After a hard reset, the device is restored to its default settings—the way it was when you first purchased it and turned it on. Any programmes you installed, data you entered, and settings you customised on the device will be lost. Only Windows Mobile software and other pre-installed programmes will remain.

To perform a soft reset

- Use the stylus to lightly press and hold the RESET button on the left side of your MDA Pro.

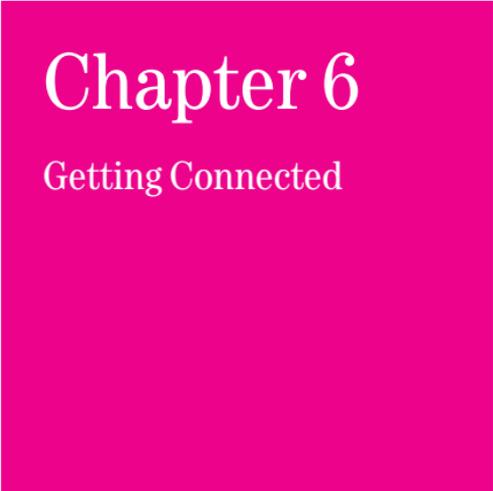

The device restarts and displays the Today screen.

To perform a hard reset

- Press and hold both SOFT KEYS shown enclosed by circles in the picture below. Keep these keys pressed, and at the same time, use the stylus to lightly press and hold the RESET button on the left side of your MDA Pro. Press either 0 to restore to factory default or X to exit the hard reset process.

Chapter 6

Getting Connected

- 6.1 Connecting to the Internet
- 6.2 Internet Explorer Mobile
- 6.3 Using Bluetooth
- 6.4 Using Wireless Modem
- 6.5 Using Wireless LAN Manager
- 6.6 Using GPRS Monitor
- 6.7 Using Terminal Services Client

6.1 Connecting to the Internet

Your MDA Pro is equipped with powerful networking functions that enable you to connect to the Internet through a General Packet Radio Service (GPRS) network or a Bluetooth modem. The GPRS is a new nonvoice value added service that allows information to be sent and received across a mobile telephone network.

You can set up connections to the Internet or to a corporate network to browse the Internet, and exchange e-mail or instant messages.

Your device has two groups of connection settings: My ISP (Internet Service Provider) and My Work Network. The My ISP settings are used to connect to the Internet, while My Work Network settings can be used to connect to any private, corporate network.

To connect to the Internet via ISP

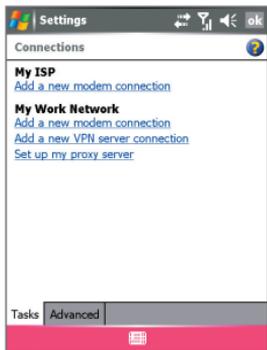

1. Obtain the following information from your ISP:
 - ISP server phone number
 - User name
 - Password
 - Access point name (required for GPRS connection)
2. Tap **Start > Settings > Connections** tab > **Connections**.
3. Tap **Add a new modem connection**.
4. Enter a name for the connection.
5. Select a modem from the list:
 - If you want to use the mobile phone network, select **Cellular Line**.
 - If you want to use GPRS, select **Cellular Line (GPRS, 3G)**.
6. Tap **Next**.
7. Complete the connection wizard by entering the required information and tap **Finish**.

Notes To view additional information for any screen, tap **Help**.

To modify your connection settings, tap **Manage existing connections** on the **Connections** screen, and complete the connection wizard.

To start browsing the Internet, tap **Start > Programs > Internet Explorer**.

To connect to a private network

Connection Setting

- Obtain the following information from your network administrator:
 - Server phone number
 - User name
 - Password
 - Domain (If provided by an ISP or a network administrator)
- Tap **Start > Settings > Connections** tab > **Connections**.
- In **My Work Network**, follow the instructions for each type of connection.
- Complete the connection wizard and tap **Finish**.

Note To start browsing the private network, tap **Start > Programs > Internet Explorer**.

To reset or modify the network card settings on your device

- Tap **Start > Settings > Connections** tab > **Network Cards**.
- In the **My network card connects to list**, select the appropriate item:
 - If you want to connect to the Internet using your ISP, select **The Internet**.
 - If you want to connect to a private network, select **Work**.
- In **Tap an adapter to modify settings**, tap the appropriate adapter. The fields on the IP Address tab are populated automatically.
- Configure the TCP/IP settings, if required.

If your ISP or private network does not use dynamically-assigned IP addresses, tap Use specific IP address and enter the requested information. Contact your ISP or network administrator to obtain the IP address, subnet mask, and/or default gateway (if required).

5. Configure the DNS and WINS settings, if required.

If your ISP or private network does not use dynamically-assigned IP addresses, enter the requested information on the Name Servers tab. Servers that require an assigned IP address may also require a way to map computer names to IP addresses. DNS and WINS are the resolution options supported on your device.

6.2 Internet Explorer Mobile

Internet Explorer Mobile is a full-featured Internet browser, optimized for use on your mobile device.

To start Internet Explorer Mobile

- Tap **Start > Internet Explorer**.

To choose a Home page

1. In Internet Explorer Mobile, tap **Menu > Tools > Options > General** tab.
2. Do one of the following:
 - To use the displayed page as your Home page, tap **Use Current**.
 - To use the default Home page, tap **Use Default**.

Tip To go to your Home page, tap **Menu > Home**.

To transfer favorites from your PC

You can transfer the favorites you have stored on your PC to your device by synchronizing the Internet Explorer favorites on your PC with your device.

1. In ActiveSync on your PC, on the Tools menu, click **Options**, and select **Favorites**.
2. In Internet Explorer on your PC, save or move favourite links to the Mobile Favorites subfolder in the Favorites list.
3. Connect your mobile device to your PC. If synchronization does not start automatically, click **Sync**.

To add a favourite

1. In Internet Explorer Mobile, go to the page you want to add.
2. Tap and hold the page, and tap **Add to Favorites**.
3. Confirm or change the name, and select a folder for storing the favourite.

Note By default, starting Internet Explorer takes you to the T-Mobile Favorites zone, where you can find details about T-Mobile products and services and other interesting information that is offered by T-Mobile.

To delete a favourite or folder

1. In Internet Explorer Mobile, tap **Menu > Favorites > Add/Delete** tab.
2. Select the item you want to delete, and tap **Delete**.

To change how Web pages fill the screen

1. In Internet Explorer Mobile, tap **Menu > View**.
2. Tap one of the following:
 - **One Column.** Arranges the content into one column that is as wide as the screen. This means that you will rarely have to scroll horizontally.
 - **Default.** Maintains a layout similar to what you see on a desktop computer, but it makes items smaller and arranges the content so that you can see most of it without having to scroll horizontally.
 - **Desktop.** Keeps the same layout and size as on a desktop computer, which will require both horizontal and vertical scrolling.

To change the size of text on Web pages

- In Internet Explorer Mobile, tap **Menu > Zoom**, and tap the size you want.

To show or hide pictures on Web pages

- In Internet Explorer Mobile, tap **Menu > View > Show Pictures**.

A check mark next to **Show Pictures** indicates that pictures will be displayed on Web pages.

To clear the History list

1. In Internet Explorer Mobile, tap **Menu > Tools > Options > Memory** tab.
2. Tap **Clear History**.

To save a picture from a Web page

1. In Internet Explorer Mobile, tap and hold the picture, and tap **Save Image**.
2. Do one of the following:
 - To save the picture in **My Pictures** on your device, tap **Yes**.
 - To save the picture in another location, such as a storage card, tap **Save As**.

To change cookies and security settings

Internet Explorer Mobile supports the protocols used by Secure Sockets Layer (SSL). A connection that uses SSL helps you to send personal information more safely.

Cookies are small files containing information about your identity and preferences so that a page can tailor information to your needs. The page sends the file, and it is stored on your mobile device.

1. In Internet Explorer Mobile, tap **Menu > Tools > Options > Security** tab.
2. Select the check boxes for the options you want, and click **OK**.

Tip To prevent Internet Explorer Mobile from accepting any cookies, clear the **Allow cookies** check box.

To delete temporary Internet files

Some Web content is stored as you view it to speed up the display of pages you frequently visit or have already seen. You may want to delete these files to free storage space.

1. In Internet Explorer Mobile, tap **Menu > Tools > Options > Memory** tab.
2. Tap **Delete Files**.

All pages stored on your device, including offline favorites content, will be deleted.

6.3 Using Bluetooth

Bluetooth is a short-range wireless communications technology. Devices with Bluetooth capabilities can exchange information over a distance of about 10 meters without requiring a physical connection. You can even beam information to a device in a different room, as long as it is within range.

The software included with your device allows you to use Bluetooth in the following ways:

- Beam information, such as files, appointments, tasks, and contact cards, between devices that have Bluetooth capabilities.
- Create a dial-up modem connection between your device and a Bluetooth-enabled phone, and then beam information using the Bluetooth phone as a modem.

To turn on or off Bluetooth on your device

1. On your device, tap **Start > Settings > Connections** tab > **Bluetooth**.
2. Select the **Turn on Bluetooth and Make this device discoverable to other devices** check boxes.
3. Tap **OK**.

Note To add an extra layer of security while beaming information with other devices, or to set up Bluetooth synchronization, tap **Start > Settings > System** tab > **Bluetooth Setting**.

Bluetooth modes

Bluetooth on your device operates in three different modes:

- **On.** Bluetooth is turned on and you can use Bluetooth features.
- **Off.** Bluetooth is turned off. In this mode, you can neither send nor receive information using Bluetooth. You might want to turn the radio off at times in order to conserve battery power, or in situations where radio use is prohibited, such as onboard an aircraft and in hospitals.

Note By default, Bluetooth is turned off. If you turn it on, and then turn off your device, Bluetooth also turns off. When you turn on your device again, Bluetooth automatically turns on.

- **Discoverable.** Bluetooth is turned on, and all other Bluetooth-enabled devices within a range of 10 meters can detect your device.

To make your device discoverable

1. On your device, tap **Start > Settings > Connections tab > Bluetooth**.
2. Select the **Turn on Bluetooth** and **Make this device discoverable to other devices** check boxes.
3. Tap **OK**.

Note Selecting the **Make this device discoverable to other devices** check box also turns on Bluetooth.

Bluetooth partnerships

A Bluetooth partnership is a relationship that you create between your device and another Bluetooth-enabled device in order to exchange information in a secure manner. Creating a partnership between two devices involves entering the same personal identification number (PIN) on both devices. Creating a partnership between two devices is a one-time process. Once a partnership is created, the devices can recognize the partnership and exchange information without entering a PIN again. Make sure the two devices are within a range of 10 meters from one another, and Bluetooth is turned on and in discoverable mode.

To create a Bluetooth partnership

1. On your device, tap **Start > Settings > Connections tab > Bluetooth**.
2. On the Devices tab, tap **New Partnership**.
Your device searches for other Bluetooth devices and displays them in the box.
3. Tap the desired device name in the box.
4. Tap **Next**.
5. Enter a passkey to establish a secure connection.
The passkey must be between 1 and 16 characters.
6. Tap **Next**.
7. Enter the same passkey that is entered on the other device.
You can, however, edit and enter a new name for the other device.
8. Tap **Finish**.

To accept a Bluetooth partnership

1. Ensure that Bluetooth is turned on and in discoverable mode.
2. Tap **OK** when prompted to establish a partnership with the other device.

3. Enter a passkey (the same passkey that is entered on the device requesting the partnership) to establish a secure connection.

The passkey must be between 1 and 16 characters.

4. Tap **Next**.
5. Tap **Finish**.

You can now exchange information with the other device.

To rename a Bluetooth partnership

1. Tap **Start > Settings > Connections** tab > **Bluetooth**.
2. Tap and hold the partnership on the **Devices** tab.
3. On the shortcut menu, tap **Edit**.
4. Enter a new name for the partnership.
5. Tap **Save**.

To delete a Bluetooth partnership

1. Tap **Start > Settings > Connections** tab > **Bluetooth**.
2. Tap and hold the partnership on the **Devices** tab.
3. Tap **Delete** from the shortcut menu.

Beam information using Bluetooth

To beam information from your device

1. On the device, tap and hold an item to beam.
The item can be an appointment in your calendar, a task, a contact card, or a file.
2. Tap **Beam [type of item]**.
3. Tap the device name to which you want to send the beam.
The item is beamed to the device you selected.

Note If the device you want to beam to does not appear in the box, make sure that it is turned on, discoverable, and within close range (10 meters) of your device.

Use a Bluetooth device as a modem

You can use a phone that has Bluetooth capabilities as a modem for your device. To do so, create a Bluetooth modem connection on your device and then send information to another device by using Bluetooth. The device relays the information over the network and then sends back to your device any information that you had requested over the connection.

Once you create a modem connection to the Bluetooth phone, you can reuse it whenever you want to use the phone as a modem. Make sure that your device and the destination device are turned on, Bluetooth is turned on, and that the devices are within close range.

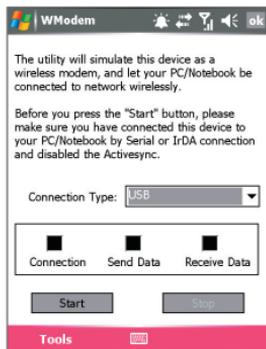

To configure and use a Bluetooth device as a modem

1. On your device, tap **Start > Settings > Connections** tab > **Connections**.
2. Tap **Add a new modem connection**.
3. Enter a name for the connection.
4. In the **Select a modem** list, tap **Bluetooth**.
5. Tap **Next**.
6. If the device appears in the **My Connections** list, skip to step 11.
7. If the device does not appear in the **My Connections** list, tap **New**, and follow the remaining steps.
8. Select the device name from the list and tap **Next**.
9. Enter a passkey and tap **Next**.
10. Enter the same passkey on the device and tap **Finish**.
11. In the **My Connections** list, tap the device and tap **Next**.
12. Enter the phone number to dial for this connection and tap **Next**.
13. Enter the required logon information for this connection and tap **Finish**.

You can start using this service for the programme that uses the Bluetooth connection, such as Inbox on your device, to send and receive e-mail, or Internet Explorer to browse the Web.

6.4 Using Wireless Modem

This programme activates your device as a wireless modem and lets you connect your PC to a wireless network. Before you create and configure a new modem using a connection, you must install the drivers on your PC.

Wireless Modem

To establish a connection using Wireless Modem

1. On your device, tap **Start > Programs > Wireless Modem**.
 2. In the **Connection Type** list, select **IrDA**.
- This allows you to connect your device via infrared to a PC.
3. Tap **Start**.

Important note Before you tap Start, make sure your device has a GPRS SIM card installed, and you have connected your device to a PC using an IrDA (infrared) connection, and disabled ActiveSync.

Set up your PC

Before you start using Wireless Modem with an IrDA connection, you must configure a new modem on your PC and obtain the APN (Access Point Name) from your Internet service provider (ISP).

To configure a modem on your PC

1. On your PC, select **Start > Settings > Control Panel**.
2. Double-click **Phone and Modem Options**.

3. On the **Modems** tab, click **Add**.
4. Select the **Don't detect my modem; I will select it from a list** check box.
5. In the **Manufacturers** list, select **Standard Modem Types**.
6. Select **Standard 33600 bps Modem** and click **Next**.
7. Select the modem port on which you want to install the drivers.
8. Click **Next**.
9. Click **Finish**.

Now, when you check the **Modems** tab in the **Phone and Modem Options** dialog box, a Standard 33600 bps Modem appears in the modem list.

10. Select **Standard 33600 bps Modem**.
11. Click **Properties**.
12. Click the **Advanced** tab.
13. Enter the following string in the Extra initialization commands field: AT+CGD
CONT=1,"IP","APN","","",0,0.
14. Click **Change Default Preferences**.
15. On the **General** tab, select **Float control to None**.
16. Click **OK** until the modem installation wizard exits.

To create a new dial-up connection

After a new standard modem has been set up on your PC, you must create a new dial-up connection.

1. On your PC, select **Start > Settings > Control Panel**.
2. Double-click **Network** and **Dial-up Connections**.
3. Double-click **Make New Connection**.
4. Click **Next** to continue.
5. Click **Dial-up to the Internet**.
6. Click **Next**.
7. Click **I want to set up my Internet connection manually, or I want to connect through a local area network (LAN)** and click **Next**.
8. Click **I connect through a phone line and a modem** and click **Next**.
9. Select the **Use area code and dialing rules** check box.
10. Enter the telephone number as *99# and click **Next**.
11. Enter the user name and password you use to log on to your ISP and click **Next**.

12. Enter a name for this connection and click **Next**.
13. Select **No** when the installation wizard prompts you to set up an Internet mail account and click **Next**.
14. Click **Finish** to exit the wizard.

Connect through a USB Port

To connect through a USB port, you need to first set up a USB modem on your PC. Before setting up a USB modem, verify that you have the following files:

- USBMDM
- USBModem_Dialer

Both files are available on the Getting Started CD. Run the Getting Started CD from the CD-ROM of your PC and do the following on your device:

1. On your device, tap **Start > Programs > Wireless Modem**.
2. Select **USB** as the connection type, and insert the USB cable adapter.
3. Tap **Start** on the Wireless Modem screen of your device.
The Found New Hardware message appears on your PC.
4. On your PC, select **Display a list of the known drivers for this device so that I can choose a specific driver** and click **Next**.
5. In the **Hardware types** list, select **Modem** and click **Next**.
6. Click **Next**.
7. Click **Have Disk**.
8. Click **Next**.
9. Select the recognized USB Modem from the **Modems** list.
10. Click **Next**.
11. Click **Finish**.
12. On your PC, click **Start**, click **Settings**, and click **Control Panel**.
13. Double-click **Phone and Modem Options**.
14. Select the new USB modem from the **Modems** list.
15. Double-click the **USB Modem Dialer** file on the Getting Started CD.
16. Enter the GPRS settings (enter the APN assigned by your ISP)
17. Click **Dial to start the connection**.

Once you set up a USB modem on your PC, you are ready to establish a connection using Wireless Modem via a USB port.

To establish a connection using Wireless Modem via a USB port

1. On your device, tap **Start > Programs > Wireless Modem**.
2. In **Connection Type**, select **USB**.
3. Tap **Start**.

Note Before you tap **Start**, make sure your device has a GPRS SIM card installed, and you have connected your device to a PC using the device to PC USB connector (using the USB sync cable or cradle) and disabled ActiveSync.

To establish a connection using Wireless Modem via Bluetooth

1. On your device, tap **Start > Programs > Wireless Modem**.
2. In **Connection Type**, tap **Bluetooth**.
3. Tap **Start**.

Notes Before you start using your device as a Bluetooth modem, make sure that your PC is Bluetooth-enabled. You also need to check that:

- A GPRS-enabled SIM card is installed on your device.
- The ActiveSync BT port connection of your PC is disabled.
- The Infrared function is disabled.

Note the interface of the Bluetooth programme installed on your PC may vary. If so, follow the installation instructions in the manual that came with your PC.

6.5 Using Wireless Manager

Wireless Manager allows you to view and manage Wi-Fi Internet connections, Bluetooth, and second generation network (GPRS) on your device. You can use the device's Power Save Mode to make optimal use of the battery under the WLAN networking environment, view a variety of data related to the current configuration and signal quality, and increase network security.

To run Wireless LAN on your device, you need access to broadband Internet, and the necessary access point or router that emits WLAN signals. If you do not have access to broadband Internet, consult your ISP before you try to run this utility. However, the availability and range of your device's WLAN signal depends on the number, infrastructure, and other objects through which the signal passes.

Notes You can activate Bluetooth on your device and communicate with other Bluetooth enabled devices. To communicate, make sure you have another device with Bluetooth activated on it, which is within the close range of your device (within 10-meter range).

To activate a second generation network like GPRS on your device and communicate with other devices on the network, you need to have a SIM or USIM card installed on your device.

Check for a Wireless LAN signal

Before you start a Wi-Fi connection, verify that your device has access to a Wireless LAN channel signal. You can check the current wireless connection status from the following three screens of your device.

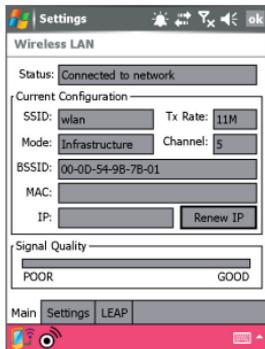

- Today screen. If your device detects a WLAN network connection, the WLAN connection icon appears at the top of the Today screen and a "W" icon appears at the bottom-right corner of the screen.
- Wireless LAN Main screen. The current connection status and signal quality for each specific wireless channel appears on the Wireless LAN Manager screen with the current configuration.
- Configure Wireless Networks screen. This screen displays the wireless networks currently available and allows you to add new ones if available.

Note WLAN (Wi-Fi) is the default wireless channel setting for your device. However, GPRS starts by default if your device does not detect any Wi-Fi signal.

To connect to a Wi-Fi network

Wireless Manager

Wireless LAN

1. Tap **Start** > **Settings** > **Connections** tab > **Wireless WLAN**. This opens the Wireless LAN Main screen.
2. Tap  to open Wireless Manager.
3. Tap **On** corresponding to **WLAN icon** ()
The WLAN icon () is highlighted to indicate that Wi-Fi is turned on.
4. Tap **Settings** to configure and connect to a Wi-Fi network.

Note Tap  on the Wireless LAN Main screen to configure wireless networks and network adapters.

To save battery power while connected to a Wi-Fi network

1. On the **Settings** tab of the Wireless LAN Main screen, move the **Power Save Mode** slider to a position that optimizes performance with the least power consumption.
2. Select the **Auto turn off WLAN if not connected** check box to allow your device to turn off the WLAN function automatically when no signal is detected.

To increase security of the Wi-Fi network

The LEAP (Lightweight Extensible Authentication Protocol) feature of Wireless LAN increases security on your device, and ensures that nobody is able to access your network without your permission.

1. On the Wireless LAN Main screen, tap the **LEAP** tab.
2. Tap **New**.

By default, the LEAP screen displays data that you entered previously. However, you can modify or delete the data as required by tapping **Modify** or **Delete**.

3. Enter the SSID (Service Set Identifier).
4. Enter the user name, password, and domain.
5. Select an **Authentication Type**.

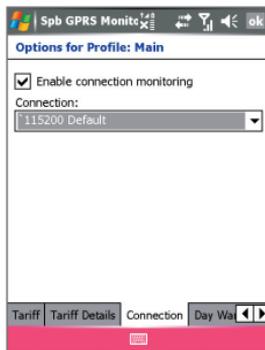

By default, the **Authentication Type** for your device is **Open System authentication**.

Note For LEAP to work correctly, both the access point and the receiving device (your device) must be set with the same SSID, user name, and password.

6.6 Using GPRS Monitor

GPRS Monitor reports the amount of data transfer for any specified time period, generates a log for daily, monthly, and yearly data transfer, compares collected data against pre-defined data traffic (tariff) rates, and performs other activities that help you maintain your mobile device account. With GPRS Monitor, you can easily monitor the data traffic use and the tariff based on a data plan offered to you by a service provider.

To specify the connection to be monitored

GPRS Monitor Options for
Main Profile, Connection

1. On the device, tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Connection** tab, select the **Enable connection monitoring** check box.
4. In the **Connection** list, tap the connection you want to monitor.

GPRS Monitor supports multiple profiles. If you are usually in the Roaming profile, you might want to consider setting up several profiles, each representing a single provider or tariff.

To specify the service plan offered by your GPRS service provider

Options for Profile: Main

Monthly payment (\$):

Inclusive data (MB):

Additional data price (\$): for:

Tariff Tariff Details Connection Day Wa

GPRS Monitor Options for
Main Profile, Tariff

Options for Profile: Main

Online price (\$):

per:

Data block size:

hourly rounding

Month start day:

Tariff Tariff Details Connection Day Wa

GPRS Monitor Options for
Main Profile, Tariff Details

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Tariff** and **Tariff Details** tabs, enter the appropriate information.

Note GPRS Monitor calculates the network connection costs based on your information. However, the calculation done by your device GPRS Monitor is only an estimate. The actual amount charged by your service provider may differ.

To set the display to monitor data connection charges

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Icon** tab, select the **Show Taskbar Icon** check box.
4. Tap **Customise**.
5. On the **Icon Bar** tab, select the data that you want GPRS Monitor to display.

Note There are five bars that allow you to display the information: Speed, Session Traffic, Day Traffic, Month Traffic, and Battery. If you want the bar to reset after it is full, select the **Reset** bar when full check box.

Limit data connection charges

To limit data connection charges, you can set up traffic limit notifications on your device and be notified when a traffic limit is reached. You can specify a maximum of three daily and three monthly limits. The traffic amount is specified in megabytes, kilobytes, or in the form of a percentage of the daily or monthly use. Once traffic reaches one of these limits, you will receive a notification that the limit has been reached.

To set up traffic limit notifications

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Day warn** and **Month warn** tabs, enable **warnings**.

Run GPRS Monitor

GPRS Monitor provides you with reports on your network connection usage. You can see charts and reports for the traffic and cost, and export these reports to CSV files that you can open with Excel, Access, and similar spreadsheet and database software.

To use the taskbar icon

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Icon** tab, select the **Show taskbar icon** check box.

The GPRS Monitor taskbar icon displays the following information by default:

- GPRS connection speed. The full bar corresponds to 19 KB per second.
 - GPRS data block usage. The full bar corresponds to 100%, while each item is 20%.
 - Battery status. Each bar corresponds to 20% of the total charge.
4. Adjust the slider to set the icon's position on the taskbar.

To customise the GPRS Monitor Today plug-in

1. Tap **Start > Settings > Personal tab > Today**.
2. On the **Items** tab, tap **GPRS Monitor**.
3. Tap **Options**.

The following configuration options are available on the **Display** tab:

- Refresh every ... seconds. Defines the update frequency of the plug-in indicators.
- Traffic status for. Lets you select options for displaying traffic amounts/costs for today, this week, this month, or the current session.
- Traffic cost. Displays the cost and traffic status.
- Current connection speed. Displays the current connection speed.

You can also see the following items on the GPRS Monitor Today plug-in, if selected on the **Additional Items** tab:

- Brightness Panel. Lets you control the brightness of the backlight.
- Battery Panel. Lets you set your device power settings.
- Connection Status icon. Indicates whether your connection is active or has ended, and lets you connect or disconnect.
- Internet Explorer icon. Lets you open Internet Explorer Mobile by tapping the icon.
- Inbox icon. Lets you open Inbox by tapping the icon.

To get a pop-up notification for data connection information

A pop-up window appears when you tap the taskbar icon on the GPRS Monitor screen. It provides you instant access to the draft statistics of your network connection. By default, it displays the statistics of the current day. However, you can configure the screen to display the current session or past week's session by following these steps:

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. On the **Popup** tab, select the appropriate setting.

Tap the GPRS Monitor icon on the taskbar to get detailed information such as:

- Traffic (for the session, day, or week, depending on your settings)
- Costs (for the session, day, or week, depending on your settings)
- Data block usage (shows how much of the current data block you have already transferred)
- Current speed
- Day inclusive amount left

- Month inclusive amount left
- Connection usage graph for the past 7 days

The pop-up window also contains information about the current profile, and allows you to establish and end the GPRS connection. You can tap the graph and see detailed charts, or tap the profile to change it. If you tap the battery or backlight bar, the corresponding Settings screen will be shown.

To change profiles

Although you can use a different connection while roaming, configuring your device to handle different situations with the same connection is possible. GPRS roaming charges vary from one wireless service provider to another. Therefore, it is feasible to activate profiles within GPRS Monitor to measure the connection differently in these situations.

1. Tap **Start > Programs > GPRS Monitor**.
2. Tap **Tools > Options**.
3. In **Profiles**, specify the desired settings.

You can modify active profiles, rename them, and clear traffic history for a certain profile.

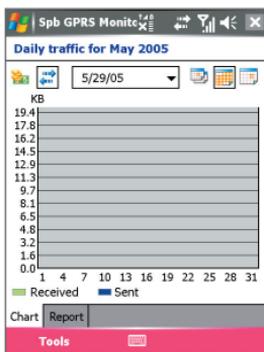

If you want to set all your profiles to use different connections, select the Auto change profile check box. This allows GPRS Monitor to automatically change profiles based on what connection you use. After you select a profile for the first time, make sure you configure its settings, tariff details, and so on.

View Charts and Reports

GPRS Monitor provides a Report Generation tool. You can use this tool to generate detailed text reports of your network connection usage for a given period of time. You can also view charts and reports for traffic and cost, and export these reports to CSV files that you can open with Excel, Access, and similar spreadsheet and database software.

To view charts and generate reports

- Tap **Start > Programs > GPRS Monitor > Chart** tab to view a network connection costs chart.
- Tap **Start > Programs > GPRS Monitor > Report** tab to generate reports on network traffic and tariff.

GPRS Monitor, Charts & Reports

6.7 Using Terminal Services Client

The Terminal Services Client allows you to log on to a PC running Terminal Services or Remote Desktop, and use all the resources available on that PC. For example, instead of running Word Mobile on your device, you can run the PC version of Word and access the .doc files available on that PC.

Connect to a Terminal Server

1. On your device, tap **Start > Programs > Terminal Services Client**.
2. Enter the server name.
3. You can also select a server name in **Recent servers** if you have recently connected to a server.
4. Select the **Limit size of server desktop to fit on this screen** check box if you want to use programmes that have been specifically sized for use with your device.
5. Tap **Connect**.

Navigate within Terminal Services Client

When connected to a remote server, you may notice that your device screen is displaying more than one horizontal and vertical scroll bar. Use these scroll bars to either scroll the contents on the PC, or to scroll the PC display through the Terminal Services Client window.

To make sure you are scrolling the PC display through Terminal Services Client, use the five directional buttons at the bottom of the Terminal Services Client window. To better fit information on your device screen, select the **Limit size of server desktop to fit on this screen** check box. For best results, the programmes on your PC should be maximised.

■ ■ ■ Disconnect without ending a session

1. From the Terminal Services Client screen on your device, tap **Start** > **Shutdown**.
2. Tap **Disconnect**.

Notes Do not use the **Start** menu on your device.

If a network administrator has configured Terminal Services Client on your device to reconnect to disconnected sessions, and you previously disconnected from a Terminal Server without ending the session, the Terminal Services Client reconnects to that session.

■ ■ ■ Disconnect after ending a session

1. From the Terminal Services Client screen on your device, tap **Start** > **Shutdown**.
2. Tap **Log Off**.

Chapter 7

Exchanging Messages and Using Outlook

- 7.1 E-mail and Text Messages
- 7.2 Using EmailWiz
- 7.3 Using MMS Messages
- 7.4 Calendar
- 7.5 Contacts
- 7.6 Tasks
- 7.7 Notes

7.1 E-mail and Text Messages

Messaging is where all of your e-mail accounts and your text message account are located. You can send and receive Outlook e-mail, Internet e-mail through an Internet service provider (ISP), and text messages. You can also access e-mail from work using a VPN connection. For more information about e-mail and text messages, see Help on the device.

To set up an e-mail account

You need to set up an e-mail account that you have with an Internet service provider (ISP) or an account that you access using a VPN server connection (typically a work account) before you can send and receive mail.

1. Tap **Start** > **Messages** > **Messaging**.

Note You can also access Messaging by tapping the **Messages** icon from the quick launch panel or the **Messages** tab on the Today screen.

2. Tap **Menu** > **Tools** > **New Account**.
3. Enter your e-mail address, and tap **Next**.
- Auto configuration** attempts to download necessary e-mail server settings so that you do not need to enter them manually.
4. Once **Auto configuration** has finished, tap **Next**.
5. Enter your name (the name you want displayed when you send e-mail), user name, and password; tap **Next**.

Select the **Save Password** check box if you want to save your password so that you do not need to enter it again.

If **Auto configuration** was successful, the **Your name** and **User name** fields automatically get populated. Tap **Next**, and then **Finish** to complete setting up your account, or tap **Options** to access additional settings. For example:

- Change the time intervals for downloading new messages.
- Limit the amount of messages that are downloaded and authentication method for outgoing mails.
- Download attachments or parts of messages.

If **Auto configuration** is unsuccessful or you have an account you access using a VPN server connection, contact your ISP or network administrator for the following information and enter it manually:

Setting	Description
User name	Enter the user name assigned to you by your ISP or network administrator. This is often the first part of your e-mail address, which appears before the at sign (@).
Password	Choose a strong password. You have the option to save your password so you do not need to enter it each time you connect to your e-mail server.
Domain	Not required for an account with an ISP. May be required for a work account.
Account type	Select POP3 or IMAP4.
Account name	Enter a unique name for the account, such as Work or Home. This name cannot be changed later.
Incoming mail server	Enter the name of your e-mail server (POP3 or IMAP4).
Outgoing mail server	Enter the name of your outgoing e-mail server (SMTP).
Require SSL connection	Select this to ensure that you always send e-mail from this account using an SSL connection. This enables you to send personal information more securely. Note that if you select this and your ISP does not support an SSL connection, you will not be able to send e-mail.
Outgoing mail requires authentication	Select this if your outgoing e-mail server (SMTP) requires authentication. Your user name and password from above will be used.
Use separate settings	Select this if your outgoing e-mail server requires a different user name and password than the ones you entered before.
Outgoing server settings	<ul style="list-style-type: none"> ▪ User name: Enter your user name for the outgoing e-mail server. ▪ Password: Enter your password for the outgoing e-mail server. ▪ Domain: Enter the domain of the outgoing e-mail server. ▪ Require SSL for outgoing mail: Select this to ensure you always send e-mail from this account using an SSL connection. This enables you to send personal information more securely. Note that if you select this and your ISP does not support an SSL connection, you will not be able to send e-mail.

Tip You can set up several e-mail accounts in addition to your Outlook E-mail account.

To compose and send a message

1. In the message list, tap **Menu > Switch Accounts** and select an account.
2. Tap **New**.
3. Enter the e-mail address or text message address of one or more recipients, separating them with a semicolon. To access addresses and phone numbers from Contacts, tap **To**.
4. Enter your message. To quickly add common messages, tap **Menu > My Text** and tap a desired message.
5. To check the spelling, tap **Menu > Spell Check**.
6. Tap **Send**.

Tips To enter symbols, tap **Shift** using the on-screen keyboard.

To set the priority, tap **Menu > Message Options**.

If you are working offline, e-mail messages are moved to the Outbox folder and will be sent the next time you connect.

If you are sending a text message and want to know if it was received, before sending the message, tap **Menu > Tools > Options**. Tap **Text Messages** and select the **Request delivery notification** check box.

To reply to or forward a message

1. Open the message and tap **Reply**, or **Menu > Reply All**, or **Menu > Forward**.
2. Enter your response. To quickly add common messages, tap **Menu > My Text** and tap a desired message.
3. To check the spelling, tap **Menu > Spell Check**.
4. Tap **Send**.

Tips To see more header information, scroll up.

To always include the original message, from the list view, tap **Menu > Tools > Options > Message** tab, and select the **When replying to e-mail, include body** check box.

In the Outlook E-mail account, you will send less data if you do not edit the original message. This may reduce data transfer costs based on your rate plan.

To add an attachment to a message

1. In an open message, tap **Menu > Insert and tap the item you want to attach: Picture, Voice Note, or File.**
2. Select the file you want to attach, or record a voice note.

To receive attachments

An attachment sent with an e-mail message or downloaded from the server appears below the subject of the message. Tapping the attachment opens the attachment if it has been fully downloaded, or marks it for download the next time you send and receive e-mail. You can also download attachments automatically with your messages if you have an Outlook E-mail or IMAP4 E-mail account.

If you have an Outlook E-mail account, do the following:

1. Tap **Start > Programs > ActiveSync.**
2. Tap **Menu > Options.**
3. Tap **E-mail > Settings**, and then select **Include File Attachments.**

If you have an IMAP4 E-mail account with an Internet service provider (ISP) or an account that you access using a VPN server connection (typically a work account), do the following:

1. Tap **Start > Messages > Messaging.**
2. Tap **Menu > Tools > Options.**
3. Tap the name of the IMAP4 account.
4. Tap **Next** until you reach **Server information**, and tap **Options.**
5. Tap **Next** twice, and select **Get full copy of messages** and **When getting full copy, get attachments.**

Tips To store attachments on a storage card rather than on the device, tap **Menu > Tools > Options > Storage** tab, and select the **Store attachments on a storage card** check box.

■ ■ ■ Downloading messages

The manner in which you download messages depends the type of account you have:

- To send and receive e-mail for an Outlook E-mail account, begin synchronization through ActiveSync. For more information, see "Synchronizing Outlook information" in Chapter 4.
- To send and receive e-mail messages for an e-mail account that you have with an Internet Service Provider (ISP) or that you access using a VPN server connection (typically a work account), download messages through a remote e-mail server. For more information, see "To download messages from the server" later in this chapter.
- Text messages are automatically received when your phone is turned on. When your phone is turned off (in flight mode), messages are held by your service provider until the next time your phone is turned on.

To download messages from the server

To send and receive e-mail messages for an e-mail account that you have with an Internet Service Provider (ISP) or that you access using a VPN server connection (typically a work account), you first need to connect to the Internet or your corporate network, depending on the account.

1. Tap **Menu > Switch Accounts** and tap the account you want to use.
2. Tap **Menu > Send/Receive**. The messages on your device and e-mail server are synchronized: new messages are downloaded to the device Inbox folder, messages in the device Outbox folder are sent, and messages that have been deleted from the server are removed from the device Inbox folder.

Tips If you want to read the entire message, tap **Menu > Download Message** while in the message window. If you are in the message list, tap and hold the message, and tap **Menu > Download Message**. The message will download the next time you send and receive e-mail. This will also download message attachments if you selected those options when you set up the e-mail account.

Managing folders

Each Messaging account has its own folder hierarchy with five default Messaging folders: Inbox, Outbox, Deleted Items, Drafts, and Sent Items. The messages you receive and send through the account are stored in these folders. You can also create additional folders within each hierarchy. The Deleted Items folder contains messages that have been deleted on the device. The behavior of the Deleted Items and Sent Items folders depends on the Messaging options you have chosen.

If you use an Outlook E-mail account, e-mail messages in the Inbox folder in Outlook will be synchronized automatically with your device. You can select to synchronize additional folders by designating them for synchronization. The folders you create and the messages you move will then be mirrored on the e-mail server. For example, if you move two messages from the Inbox folder to a folder named Family, and you have designated Family for synchronization, the server creates a copy of the Family folder and copies the messages to that folder. You can then read the messages while you are away from your PC.

If you use a text message account, messages are stored in the Inbox folder.

If you use a POP3 account and you move e-mail messages to a folder you created, the link is broken between the messages on the device and their copies on the e-mail server. The next time you connect, the e-mail server will detect that the messages are missing from the Inbox folder on the device and will delete them from the e-mail server. This prevents having duplicate copies of a message, but it also means that you will no longer have access to messages that you move to folders created from anywhere except the device.

If you use an IMAP4 account, the folders you create and the e-mail messages you move are mirrored on the e-mail server. Therefore, messages are available to you anytime you connect to your e-mail server, whether it is from your device or PC. This synchronization of folders occurs whenever you connect to your e-mail server, create new folders, or rename/delete folders when connected. You can also set different download options for each folder.

7.2 Using EmailWiz

You must set up an e-mail account on your device before you can send or receive e-mails. EmailWiz is provided to simplify the set-up process. This utility allows you to collect e-mails from most Mail Service Providers (MSPs) worldwide.

To set up an e-mail account

1. Tap **Start** > **Messages** > **EmailWiz**.

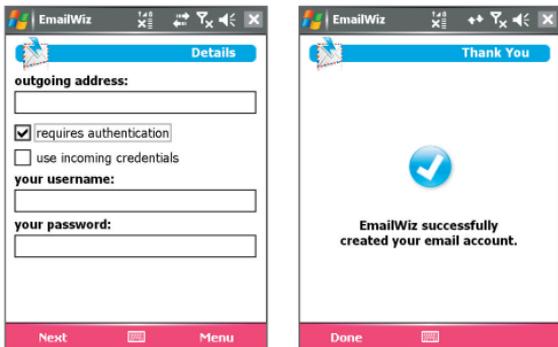

Note You can also access EmailWiz by tapping the **Messages** icon from the quick launch panel or the **Messages** tab on the Today screen.

2. The Welcome screen appears. Tap **Next**.
3. The Disclaimer and Copyright information appears. Tap **Next**.

4. Enter your e-mail address and tap **Next** to continue.

Note You can exit the set-up process at any time by tapping **Cancel**.

5. Enter your e-mail service provider's name, incoming address, your username, password, and server type information in the following fields. Tap **Next** to continue.

6. Specify the outgoing address and authentication services information in the required fields. Tap **Next** to continue.
7. Tap **Done** to complete the set-up process and exit the wizard. Now you are ready to access your e-mails by tapping **Messages** from the Today screen.

7.3 Using MMS Messages

Creating and sharing MMS messages with your friends and family is easy with your device. You can even use the device camera to capture photos and video clips while composing a new MMS message, and send them along with your message.

Set up MMS

To access MMS

- To access MMS directly, tap **Start > Messages > Messaging** or tap **Messages on the Today screen**.

Note You can also send an MMS message directly from the Pictures & Videos or Camera programs. Do one of the following:

- Select a picture from My Pictures, and tap **Menu > Send via MMS**.
- Capture a photo or an MMS video clip using the camera, and tap **Send**. Choose to send from the MMS account.

To set up an MMS account

- To set up your default MMS Messaging account, tap **Start > Messages > Messaging > Menu > Switch Accounts > MMS**.

Message Folders

Manage MMS messages

To start composing an MMS message

You can compose MMS messages in a combination of various slides, where each slide can consist of a photo, audio or video clip, and/or text.

1. Tap **Start > Messages > Messaging > New**.
2. On the Choose a Media Message screen, select a template from the list of predefined templates.

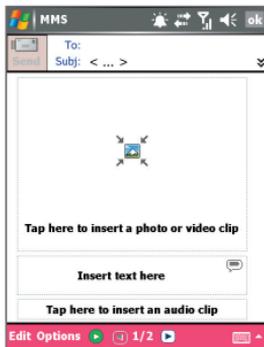

If you prefer to always use a blank MMS message, select the **Always choose custom** check box.

Note At any time, you can choose a template from the template list by tapping **Edit > New from Template** on the blank MMS message screen.

3. In **To**, enter the recipient's phone number or e-mail address directly, or tap **To**, **Cc**, or **Bcc** to choose a phone number or an e-mail address from Contacts.
4. Enter a subject for your message.
5. Tap  to select and send a photo or video clip.
6. Enter text and insert audio clips by tapping the respective areas.
7. Tap **Send** to send the message.

Note The following icons act as shortcuts to some of the operations on the MMS Message screen:

- Tap  to preview your message
- Tap  to go to the previous slide
- Tap  to go to the next slide

New MMS Message

An MMS ready for sending

To create an MMS message from a template

- Tap **Edit** > **New from Template** to compose a message using a predefined template.

Note To save a message as a template, open the message and tap **Edit** > **Save as Template**.

To set advanced options for an MMS message

- Tap **Options** > **Background** to choose a background color from the list.
- Tap **Options** > **Text on Top** to align the included text to appear at the top of the message.
- Tap **Options** > **Text Below** to align the included text to appear at the bottom of the message.
- Tap **Options** > **Message Options** to configure and manage the sending time, validity, priority, class, and other settings for a message.

To insert a photo or video clip into an MMS message

You can add either a still image or a video clip to each individual slide on the MMS message screen.

1. Tap  to insert a photo or video clip.

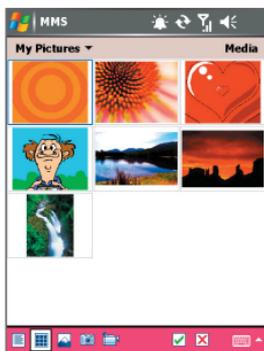

The My Pictures folder opens by default with the thumbnail view () of the pictures. To navigate to any other folder containing pictures or videos, tap the Down arrow corresponding to My Pictures folder.

2. Select a photo or video clip, and tap  to view it.

3. Tap  to insert the photo or video clip.

You can discard this photo or video clip by tapping . To capture a new photo or video clip and send it immediately with the message, tap  or . The newly captured photo or video clip is automatically inserted into your message.

Note Tapping and holding the stylus on a thumbnail displays a shortcut menu with the options **File Info** and **Delete**. Choosing **File Info** displays the file information for a photo or video clip, while choosing **Delete** removes the selected photo or video clip.

Media Selection Screen

Canned Text Selection

To add predefined text strings to an MMS message

You can instantly add text to any slide from a list of predefined words or phrases, called Canned Text.

- Tap  to add a text string from the Canned Text list.

Note To edit or delete a phrase on the Canned Text list, tap and hold a string and tap **Edit** or **Delete** from the shortcut menu. To create and add a new phrase to the list, tap **New**.

To add an audio clip to an MMS message

You can add audio clips to your MMS message. However, you can add only one audio clip per slide.

- Tap **Tap here to insert an audio clip**.

The My Sounds folder opens by default with a list of existing audio clips.

To navigate to another folder containing audio clips, tap the Down arrow corresponding to My Sounds folder.

- Select an audio file and tap , , and  to play, pause, and stop the audio clip and listen to it. To insert the file into your MMS message, tap .
- To record a new audio clip and add it to your MMS message, tap . This activates the recording control mode for a new audio clip. Tap  to start recording and  to stop recording.

The new audio clip is automatically inserted into your MMS message.

To reply to an MMS message

- Tap **Menu > Reply** to reply to the sender of the message, or tap **Menu > Reply All** to reply to all persons listed in To, Cc, and Bcc of the message.

To view an MMS message

You can view MMS messages in several ways.

- Use the playback controls , , and .
- Tap **Objects** to see a list of files included in the message. To save a file, select it, and tap **Tools > Save**.
- View the slides manually by scrolling through the message using the NAVIGATION control.

Change MMS settings

You can set options to keep track of your messages, retrieve messages immediately, accept or reject messages, and request a delivery or read receipt. You can also specify a resolution for images you send, message delivery attempts, and set up a server to access messages.

To configure MMS settings

1. Tap **Start > Messages > Messaging > Menu > MMS Configuration**.
2. Select any of the following:
 - **Retrieve messages immediately.** Select this check box to download new messages automatically without being notified. (Typically, when you are connected to a network, you receive a notification whenever you receive a new message.) You can also choose to download messages when you are on your home network only.
 - **Save sent messages.** Select this check box to save a copy of messages that you send.
 - **Reject all messages.** Select this check box so all incoming MMS messages are not downloaded.
 - **Allow delivery report and Allow read report.** Select these check boxes to send and receive delivery and read reports.
 - **Attempts before giving up.** Select a value from this list to limit the number of times the programme attempts to send your message.
 - **Photo resolution.** Select a value from this list to choose the resolution for images that you send. Decreasing the original resolution helps speed up the sending and receiving of messages.
 - **Servers.** On this tab, you can create a new server or select an existing one from the list to store and manage your messages. You can also set a server as default by tapping **Set As Default**.

Configuring MMS Messages

7.4 Calendar

Use Calendar to schedule appointments, including meetings and other events. Your appointments for the day can be displayed on the Today screen. If you use Outlook on your PC, you can synchronize appointments between your device and PC. You can also set Calendar to remind you of appointments with a sound or flashing light, for example.

You can look at your appointments in several different views (Day, Week, Month, Year, and Agenda). To see detailed appointment information in any view, tap the appointment.

To schedule an appointment

1. Tap **Start > Programs > Organiser > Calendar**.

Note You can also access Calendar by tapping the **Organiser** icon from the quick launch panel on the Today screen.

2. Tap **Menu > New Appointment**.
3. Enter a name for the appointment, and enter information such as start and end times.
4. To schedule an all-day event, in the **All Day** box, tap **Yes**.
5. When finished, tap **OK** to return to the calendar.

Notes All-day events do not occupy blocks of time in Calendar; instead, they appear in banners at the top of the calendar.

To cancel an appointment, tap the appointment and tap **Menu > Delete**.

Tip To have the time entered automatically in Day view, tap the time slot for the new appointment, and tap **Menu > New Appointment**.

To send a meeting request

Use Calendar to schedule meetings via e-mail with contacts who use Outlook or Outlook Mobile.

1. Tap **Start > Programs > Organiser > Calendar**.
2. Schedule a new appointment, or open an existing one and tap **Edit**.
3. Tap **Attendees**.
4. Tap the name of the contact you want to invite.

5. To invite each additional attendee, tap **Add** and tap the name.
6. Tap **OK**.
7. The meeting request will be sent to the attendees the next time you synchronise your device with your PC.

Note When attendees accept your meeting request, the meeting is automatically added to their schedules. When their response is sent back to you, your calendar is updated as well.

To set a default reminder for all new appointments

You can have a reminder automatically turned on for all new appointments you schedule.

1. Tap **Start > Programs > Organiser > Calendar**.
2. Tap **Menu > Options > Appointments** tab.
3. Select the **Set reminders for new items** check box.
4. Set the time when you want the reminder to alert you.
5. Tap **OK** to return to the calendar.

7.5 Contacts

Contacts is your address book and information storage for the people and businesses you communicate with. Store phone numbers, e-mail addresses, home addresses, and any other information that relates to a contact, such as a birthday or an anniversary date. You can also add a picture or assign a ring tone to a contact.

From the contact list, you can quickly communicate with people. Tap a contact in the list for a summary of contact information. From there, you can call or send a message.

If you use Outlook on your PC, you can synchronise contacts between your device and PC.

To create a contact

1. Tap **Start > Contacts > Contacts**.

Note You can also access Contacts by tapping the **Contacts** icon from the quick launch panel on the Today screen.

2. Tap **New** and enter the contact information.
3. When finished, tap **OK**.

Tips If someone who is not in your list of contacts calls you or sends you a message, you can create a contact from Call History, or from the message by tapping **Menu > Save to Contacts**.

In the list of contact information, you'll see where you can add a picture or assign a ring tone to a contact.

To change contact information

1. Tap **Start > Contacts > Contacts**.
2. Tap the contact.
3. Tap **Menu > Edit** and enter the changes.
4. When finished, tap **OK**.

To work with the contact list

There are several ways to use and customise the contact list. Here are a few tips:

1. Tap **Start > Contacts > Contacts**.
2. In the contact list, do any of the following:

- In Name view, you can search for a contact by entering a name or number, or by using the alphabetical index. To switch to Name view, tap **Menu > View By > Name**.
- To see a summary of information about a contact, tap the contact. From there you can also make a call or send a message.
- To see a list of available actions for a contact, tap and hold the contact.
- To see a list of contacts employed by a specific company, tap **Menu > View By > Company**. Then, tap the company name.

To copy SIM contact to Contacts

If you have saved contacts on your SIM card, you can copy them into Contacts on your device.

1. Do one of the following to open SIM Manager:
 - Tap **Start > Contacts**. Then, tap **Menu > SIM Manager**.
 - Tap **Start > Programs > SIM Manager**.
2. Select the desired item, and then tap **Tools > Save To Contacts**.

To find a contact

There are several ways to find a contact when your contact list is long.

1. Tap **Start > Contacts > Contacts**.
2. If you are not in Name view, tap **Menu > View By > Name**.
3. Do one of the following:
 - Begin entering a name or phone number in the provided text box until the contact you want is displayed. To show all contacts again, tap the text box and clear the text, or tap the arrow to the right of the text box.
 - Use the alphabetical index displayed at the top of the contact list.
 - Filter the list by categories. In the contact list, tap **Menu > Filter**. Then tap a category you have assigned to a contact. To show all contacts again, select **All Contacts**.

7.6 Tasks

Use Tasks to keep track of things you need to do. A task can occur once or repeatedly (recurring). You can set reminders for your tasks and you can organize them using categories.

Your tasks are displayed in a task list. Overdue tasks are displayed in red.

To create a task

1. Tap **Start > Programs > Organiser > Tasks**.

Note You can also access Tasks by tapping the **Organiser** icon from the quick launch panel on the Today screen.

2. Tap **New**, enter a subject for the task, and fill in information such as start and due dates, priority, and so on.
3. When finished, tap **OK**.

Tip You can easily create a short, to-do-type task. Simply tap the **Tap here to add a new task** box, enter a subject, and press ENTER. If the task entry box is not available, tap **Menu > Options** and select the **Show Tasks entry bar** check box.

To change the priority of a task

Before you can sort tasks by priority, you need to specify a priority level for each task.

1. Tap **Start > Programs > Organiser > Tasks**.
2. Tap the task you want to change the priority for.
3. Tap **Edit** and in the **Priority** box, tap a priority level.
4. Tap **OK** to return to the task list.

Note All new tasks are assigned a Normal priority by default.

To set a default reminder for all new tasks

You can have a reminder automatically turned on for all new tasks you create.

1. Tap **Start > Programs > Organiser > Tasks**.
2. Tap **Menu > Options**.
3. Select the **Set reminders for new items** check box.
4. Tap **OK** to return to the task list.

Note The new tasks must have due dates set in order for the reminder to take effect.

To show start and due dates in the task list

1. Tap **Start > Programs > Organiser > Tasks**.
2. Tap **Menu > Options**.
3. Select the **Show start and due dates** check box.
4. Tap **OK**.

To locate a task

When your list of tasks is long, you can display a subset of the tasks or sort the list to quickly find a specific task.

1. Tap **Start > Programs > Organiser > Tasks**.
2. In the task list, do one of the following:
 - Sort the list. Tap **Menu > Sort by**, and tap a sort option.
 - Filter the list by category. Tap **Menu > Filter**, and tap the category you want displayed.

Tip To filter your tasks further, tap **Menu > Filter > Active Tasks** or **Completed Tasks**.

7.7 Notes

Notes helps you to quickly capture thoughts, questions, reminders, to-do lists, and meeting notes. You can create handwritten and typed notes, record voice notes, convert handwritten notes to text for easy readability, and send notes to others.

Entering information in Notes

There are several ways to enter information in a note. You can enter typed text by using the on-screen keyboard or handwriting recognition software. You can also use the stylus to write or draw directly on the screen. On devices that support recording, you can create a stand-alone recording or embed a recording in a note.

To set the default input mode for Notes

If you frequently add drawings to your notes, you may find it helpful to set Writing as the default input mode. If you prefer typed text, select Typing.

1. Tap **Start > Programs > Organiser > Notes**.
2. In the note list, tap **Menu > Options**.
3. In the **Default mode** box, tap one of the following:
 - **Writing** if you want to draw or enter handwritten text in a note.
 - **Typing** if you want to create a typed note.
4. Tap **OK**.

To create a note

1. Tap **Start > Programs > Organiser > Notes**.
2. In the note list, tap **New**.
3. Tap the **Input Selector** arrow next to the Input Method icon on the menu bar, tap the input method you want, and enter your text.
4. If the **Input Selector** arrow is not displayed, tap the Input Method icon.
5. When finished, tap **OK** to return to the note list.

To record a note

You can create a stand-alone recording (voice note) or you can add a recording to a note.

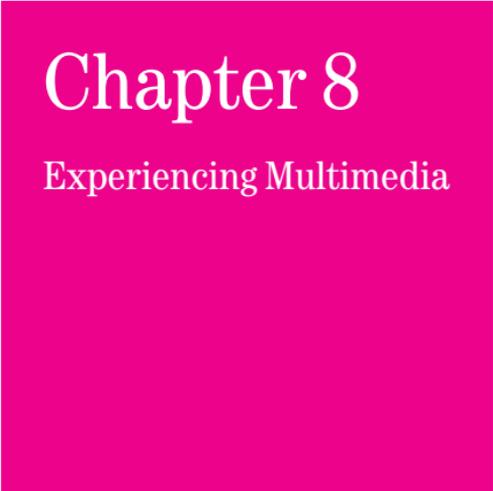

1. Tap **Start > Programs > Organiser > Notes**.
2. Do one of the following:
 - To create a stand-alone recording, record from the note list.
 - To add a recording to a note, create or open a note.
3. If you do not see the **Recording** toolbar, tap **Menu > View Recording Toolbar**.
4. Tap  to begin recording.
5. Hold your device's microphone near your mouth or other source of sound.
6. Tap  when finished recording.
7. When finished, tap **OK** to return to the note list.

If you are recording in an open note, an icon will appear in the note.

If you are creating a stand-alone recording, an icon will appear in the note list.

Note To play a recording, tap the **Recording** icon in the open note or tap the recording in the note list.

Tip To quickly create a recording, press the RECORD hardware button. When you hear the beep, begin your recording. Release the button when you are finished.

Chapter 8

Experiencing Multimedia

- 8.1 Using Camera and Camcorder
- 8.2 Using Pictures & Videos
- 8.3 Using Windows Media Player
- 8.4 Using Streaming Video Player

8.1 Using Camera and Camcorder

Taking photos and shooting video clips along with audio is easy with your device's built-in camera and camcorder. Your device has two built-in cameras, a main camera () and second camera (). The main camera operates with the full-screen resolution while the resolution for the second camera is limited to 352 x 288.

To switch to any of the Camera modes on your device, do any of the following:

- Tap **Start > Camera**.
- Press the CAMERA button on your device.

To exit the Camera screen, tap .

Use the main camera

The main camera on your device allows you to capture pictures and video clips by using various built-in modes with flexibility. The Camera mode, while using the main camera, is set to the Photo capture mode by default. The lower right corner of the screen displays the active capture mode. To switch to other capture modes, do any of the following:

- Tap  or  on the Camera screen.
- Press the Right and Left arrow keys on the hardware keyboard.
- Use the NAVIGATION control on your device.

The available capture modes of the main camera are as follows:

Capture mode	Function
Photo	Captures standard still images.
Video	Captures video clips, with or without accompanying audio.
MMS Video	Captures video clips suitable for sending via MMS.
Contacts Picture	Captures a still image and gives you the option to immediately assign it to a Photo ID for a contact.
Picture Theme	Captures still images and places them within frames.
Panorama	Captures a sequence of still images continuously in one direction, and allows stitching of all images to create a collage.
Sport	Captures a sequence of still images (5 ~ 30) automatically for a short duration at a defined frequency.
Burst	Captures a sequence of still images (maximum 30) as long as the CAMERA button or the ENTER button on the NAVIGATION control is kept pressed.

Using the above capture modes, the main camera in your device captures files in the following formats:

Capture type	Format
Still image	BMP, JPEG
Video	Motion-JPEG AVI (.avi), MPEG-4 (.mp4)
MMS Video	H.263 baseline (.3gp), MPEG-4 (.mp4)
Burst / Sport	JPEG

Use the second camera

The second camera on your device also allows you to capture pictures and video clips using various built-in modes but with a lower resolution. The Camera mode, while using the second camera, is set to the Photo capture mode by default. The lower right corner of the screen displays the active capture mode. To switch to other capture modes, do any of the following:

- Tap  or  on the Camera screen.
- Press the Right and Left arrow keys on the hardware keyboard.
- Use the NAVIGATION control on your device.

The available capture modes of the second camera are Photo, Video, MMS Video, Contacts Picture, and Picture Theme. The functions of these modes are similar to that of the main camera. Using these capture modes, the second camera also supports similar file types as are supported by the main camera of your device.

Use shortcuts in Camera mode

While in Camera mode, you can use the following buttons and icons on your device as a shortcut when performing operations.

Photo Mode

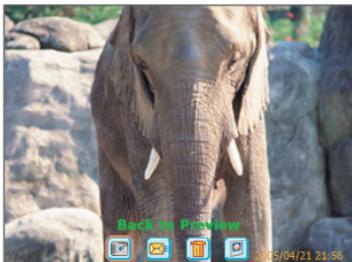

Video Mode

Camera mode icons

- **Current time indicator.** 8:13 Displays the current time.
- **Remaining information indicator.** Displays the remaining, available shots of pictures based on current settings.
- **Resolution indicator.** S / M / L / 1M / 2M Indicates the current resolution.
- **Ambience indicator.** A / / / / / / Indicates the current ambience.
- **Zoom-Ratio indicator.** 2.0x/1.0x Indicates the current zooming ratio.
- **Zoom-Ratio Switching button.** Tapping and on the Camera screen zooms in and zooms out the preview.
- **Self-Time indicator.** Indicates the current setting of Self-Timer while capturing images or videos.

- **Mode Switching button.** Tapping  and  on the Camera screen switches from the current capture mode to previous () or next () capture mode.
- **Capture Status indicator.** After you press the CAMERA button or the ENTER button on the NAVIGATION control,  indicates that the camera is processing and saving the captured picture, or recording a video clip.
- **Previous/Next Template button.** Tap  to display the previous sequential template; tap  to display the next sequential template.
- **Reset Status button.** Tap  to stop the current Panorama capture progress and revert to normal preview. The  button is active if the Auto-stitch the snapped images while in Panorama mode check box on the Camera Settings screen is not be selected.
- **Exit.** Tap  to exit the Camera programme.
- **Camera Settings.** Tap  to open the Camera Settings screen. Tap OK to return to Camera mode.
- **Flash.** Tap  to turn on the camera flash while capturing an image. Tap again to turn off the flash ()
- **Picture Viewer.** Tap  to view the picture or video in Pictures & Videos.
- **Main Camera.** Tap  to start the main camera.
- **Second Camera.** Tap  to start the second camera.

Still Image Review with Time Stamp

Video Review

Review mode icons

- **Back to Preview.** Tap  to go back to Camera mode to capture an image.
- **Send.** Tap  to send the captured image to someone via e-mail/MMS.
- **Delete.** Tap  to remove the captured image.
- **View in Pictures.** Tap  to switch to Pictures & Videos programme. The captured image will be displayed in the Detailed View.
- **View in Windows Media.** Tap  to switch to Windows Media Player to play back the new video you just recorded.
- **Assign to Contacts.** Tap  to send the new file immediately to a contact in the contact list.

ENTER button

Press the ENTER button on the NAVIGATION control to take a picture when you are capturing still image. Press this button to start recording an incoming video stream; press it again to stop recording.

NAVIGATION control

Press NAVIGATION up or down to increase or decrease the zoom level.

Press NAVIGATION left or right to go to the previous next or sequential capture mode.

CAMERA button

Press the CAMERA button to switch to Camera mode. If already in Camera mode, press once to take a still image or to start recording a video clip. In Photo capture mode, point your device and press this button to capture more still images.

Use Still Image capture modes

While using Still Image capture modes, such as Photo, Contacts Picture, Picture Theme, Panorama, Sport, and Burst, you can capture a single still image by pressing the CAMERA button or the ENTER button on the NAVIGATION control. The Still Image capture modes support either BMP or JPEG format, as specified by you on the Camera Settings screen.

While capturing an image in the Picture Theme capture mode, you can select a built-in template from the default template folder. To browse and select different

templates, tap , , or tap  and select a template from the Camera Settings screen.

Use Video capture mode

While using the Video capture mode, you can press the ENTER button or the CAMERA button on your device to start recording a video clip (with audio if desired). To stop recording, press the ENTER button or CAMERA button again. Your device displays the first frame of the captured video clip by default on the Review screen.

Before you capture a video clip, you can specify the recording limit in terms of time and file size on the Camera Settings screen so that the recording stops automatically when the clip size reaches that limit.

You can set the capture format to either Motion-JPEG AVI or MPEG-4 on the Camera Settings screen.

Use MMS Video capture mode

The MMS Video capture mode offers additional options that make it convenient for you to capture a video file and then send it via MMS. Press the ENTER button or the CAMERA button on your device to start recording a video clip (with audio if desired). To stop recording, press the ENTER button or CAMERA button again. To limit the size of the video that you plan to send through MMS, there is a fixed, preset file size specified for videos captured using the MMS Video mode. The recording process automatically stops when this limit is reached. However, you can stop recording the video manually before the specified limit is reached. The digital time indicator on the bottom left corner of the screen indicates the time limit in seconds.

You can specify the capture format to be either H.263 or MPEG-4 on the Camera Settings screen; however, the ideal format for MMS is H.263 (3GPP). After you capture the video file, tap  on the Review screen to send the file through MMS.

Use the Review screen

To access the icons on the Review mode screen

1. In Camera mode, tap **Tools > Options > General** tab.
2. Select the Review after capture check box.

Note that this check box is selected by default to allow you to review the image or video clip after it has been captured.

Use zooming

While capturing a still image or a video clip by using the main camera, you can zoom in to make the object in focus move closer, and you can zoom out to make the object move farther away. In all capture modes, use NAVIGATION on your device, or tap the triangular Up arrow next to the Zoom Ratio indicator, to zoom in a still image or an incoming video stream. When the zooming limit is reached, you will hear a beep. To zoom out, press NAVIGATION down, or tap the Down arrow.

The main camera zoom range for a picture or a video clip depends on the capture mode and capture size. Following is a summary.

Capture mode	Capture size setting	Zoom range
Video and MMS Video	Large (320 x 240)	1.0x to 2.0x
	Medium (176 x 144)	1.0x to 2.0x
	Small (128 x 96)	1.0x to 2.0x
Photo and Contacts Picture	2M (1600 x 1280)	No zooming available
	1M (1280 x 1024)	1.0x to 2.0x
	Large (640 x 480)	1.0x to 2.0x
	Medium (320 x 240)	1.0x to 4.0x
	Small (160 x 120)	1.0x to 8.0x
Picture Theme	Determined by the current template	Depends on the size of the template currently loaded
Panorama	Large (640 x 480)	1.0x to 2.0x
	Medium (320 x 240)	1.0x to 4.0x
	Small (160 x 120)	1.0x to 8.0x
Sport	Large (640 x 480)	1.0x to 2.0x
	Medium (320 x 240)	1.0x to 4.0x
	Small (160 x 120)	1.0x to 8.0x
Burst	1M (1280 x 1024)	1.0x to 2.0x
	Large (640 x 480)	1.0x to 2.0x
	Medium (320 x 240)	1.0x to 4.0x
	Small (160 x 120)	1.0x to 8.0x

The second camera zoom range for a picture or a video clip depends on the capture mode, capture format, and capture size. Following is a summary.

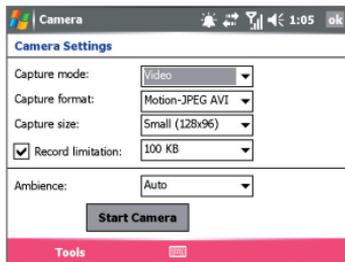

Capture mode	Capture size setting	Zoom range
Video and MMS Video	Large (352 x 288)	1.0x to 2.0x
	Medium (176 x 144)	1.0x to 2.0x
	Small (128 x 96)	1.0x to 2.0x
Photo and Contacts Picture	Medium (352 x 288)	1.0x to 2.0x
	Small (176 x 144)	1.0x to 2.0x
Picture Theme	Determined by the current template	1.0x to 2.0x

Note The capture sizes available for certain capture formats also vary from one capture mode to another. The zoom range has been calculated based on the following ratio:

- 1.0x = normal size (no zooming)
- 2.0x = double enlargement
- 4.0x = quadruple enlargement
- 8.0x = octuple enlargement

Use the Camera Settings screen

While capturing a still image or video clip using any capture modes, tap  to access the Camera Settings screen. The Camera Settings screen allows you to configure the capture settings. Following is an illustration of the Camera Settings screen.

Camera Settings

You can configure the following settings on the Camera Settings screen. After you configure settings, tap **OK** or **Start Camera** on the Camera Settings screen to go back to the Camera screen.

Setting	Allows you to
Capture mode	Select a capture mode
Capture format	Select a capture format
Capture size	Select a capture size
Capture frequency	Select a capture frequency
Record limitation	Specify the maximum time or file size for recording
Template	Select a template
Browse	Navigate to a folder containing templates
Direction	Select a capture direction
Stitch count	Select a count of snapped images
Burst count	Select a count of automatic capturing
Ambience	Select an ambience type

Use the Tools menu

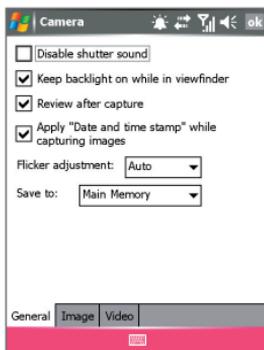

The **Tools** menu on the Camera Settings screen provides the following advanced options for configuring and customising the Camera mode functions.

Camera Settings, Tools

Adjust. Tap **Tools > Adjust** to adjust the camera display properties, such as Contrast, Brightness, Saturation, Hue, and Sharpness. Select one of these properties from the list and move the slider (or tap the slider) to change the value. The preview window on the Adjust screen displays the effect of changes you make on the Adjust screen. Tap OK to save the settings.

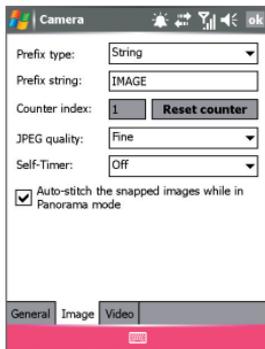

Note You can tap **Reset** at any time to reset all properties to their default.

Camera Options, General

Options. Tap **Tools > Options** to display the Options screen with the following three tabs:

- **General** tab. The **General** tab includes the following options:
 - **Disable shutter sound.** Select this check box to disable all default sounds played while capturing a still image or recording a video clip.
 - **Keep backlight on while in viewfinder.** Select this check box to ensure that the backlight remains turned on while you view the incoming video stream, overriding your MDA Pro backlight settings.
 - **Review after capture.** Select this check box to display the captured image immediately after you take a picture. The Review screen provides options for performing various operations on the new file. Clearing this check box saves any newly captured file using the default file name, and returns to the Camera screen.
 - **Apply "Date and time stamp" while capturing images.** Select this check box to automatically compose the current date and time in the captured images.
 - **Flicker Adjustment.** Select Auto to set the electrical voltage of the country where the device is being used.
 - **Save to.** Select where you want to save your captured files. You can either save the files to main memory or to a storage card.

Camera Options, Image

- **Image tab.** The **Image** tab provides image-related settings for captured files.
- **Prefix type and Prefix string.** By default, the file name of each new captured image file is set to "IMAGE" followed by a sequential number, for example: IMAGE_00001.jpg. To change this prefix, select String in the Prefix type list, and enter the desired characters in the Prefix string box.
- **Counter Index.** By default, the newly captured image files are named with a prefix and some sequential numbers, such as 00000, 00001, 00002, and so on. To reset the numbering to "00001" for your captured image files, tap Reset counter.
- **JPEG Quality.** Select the JPEG image quality level for all captured still images. You can choose from SuperFine, Fine, Normal, and Basic.
- **Self-Timer:** Select the Self-Timer option for capturing images: Off, 5 seconds, or 10 seconds. Selecting 5 seconds or 10 seconds delays the capturing by the specified time after you press the CAMERA button on the device, or the ENTER button on the NAVIGATION control.

- **Auto-stitch the snapped images while in Panorama mode.** When this check box is selected, the camera automatically stitches all snapped images into one single file. If you do not select this check box while capturing images in Panorama mode, the snapped images are saved as separate files.

Camera Options, Video

- **Video tab.** The options on the **Video** tab are for configuring the advanced settings of the captured video files.
- **Prefix type and Prefix string.** By default, the file name of each new, captured video file is set to "VIDEO" followed by a sequential number, for example: VIDEO_00001.avi. To change this prefix, select String in the Prefix type list and enter the desired characters in the Prefix string box.
- **Counter Index.** By default, the newly captured video files are named with a prefix and some sequential numbers, such as 00000, 00001, 00002, and so on. To reset the numbering to "00001" for your captured video files, tap Reset counter.
- **Recording with Audio.** Select this check box to record audio with the captured video clips. This check box is selected by default. If you clear this check box and then capture a video clip, it would have no audio.

8.2 Using Pictures & Videos

The Pictures and Videos programme collects, organizes, and sorts images and video clips in the following formats on your MDA Pro.

File Type	File Extensions
Image	.bmp .jpg
Video	.avi .wmv .mp4 .3gp

You can view the pictures as a slide show, bean them, send them via e-mail, edit them, or set them as the background on the Today screen.

To copy a picture or video clip to your MDA Pro

You can copy pictures from your PC and view them on your MDA Pro.

- Copy the pictures from your PC or a storage card to the My Pictures folder on your MDA Pro.

For more information about copying files from your PC to your MDA Pro, see ActiveSync Help on your PC.

Note You can also copy pictures from your PC to your MDA Pro using a memory card. Insert the memory card into the memory card slot on your MDA Pro, and then copy the pictures from your PC to the folder you created on the memory card.

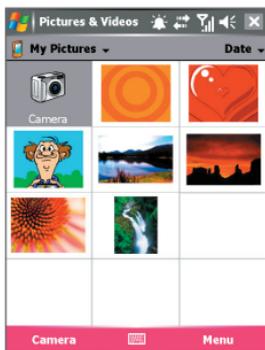

To view pictures

1. Tap **Start > Programs > Pictures & Videos**.

The images in the My Pictures folder appear as thumbnails by default.

2. Select a picture and tap **View**.

If you cannot find a picture in the default My Pictures folder, go to another folder by tapping the Down arrow.

Pictures ans Videos

To play videos with audio

1. Tap **Start > Programs > Pictures & Videos**.

The videos in the My Pictures folder appear as thumbnails by default, while the audio files appear with a  icon.

2. Select a video and tap the thumbnail to play it with the built-in Windows Media Player.

To view slideshows

You can view your pictures as a slide show on your MDA Pro. Pictures are shown in full-screen view with 5-second intervals between slides.

1. Tap **Start > Programs > Pictures & Videos**.
2. Tap **Menu > Play Slide Show**.

Note You can specify how pictures are scaled to optimize their display in a slide show. Tap **Menu > Options** and on the **Slide Show** tab, tap **Portrait Pictures** or **Landscape Pictures**.

Tap anywhere on the screen to display the Slide Show toolbar, which you can use to stop or pause the slide show, rotate the view, and more. Press NAVIGATION right or left to move forward or backward through the slides.

To start the camera from Pictures & Videos

- Tap **Camera** on the Pictures & Videos screen.

To sort pictures and video clips

If you store a large number of pictures or video clips on your MDA Pro, you may find it helpful to sort them to quickly find a specific picture or clip. You can sort by name, date, and size.

1. Tap **Start > Programs > Pictures & Videos**.
2. Tap the sort list (labeled Date by default), and select the item you want to sort by.

To delete a picture or video clip

Do any of the following to remove a picture or a video clip:

- Select a picture or video clip on the Pictures & Videos screen, and tap **Menu > Delete**. Tap **OK** to confirm the deletion.
- Tap and hold the thumbnail of the picture you want to delete, and tap **Delete**.

To edit a picture or video clip

You can rotate, crop, and adjust the brightness and color contrast of your pictures.

1. Tap **Start > Programs > Pictures & Videos**.
2. Tap the picture you want to edit.
3. Tap **Menu > Edit**, and do any of the following:
 - To rotate a picture 90 degrees counterclockwise, tap **Rotate**.
 - To crop a picture, tap **Menu > Crop**. Then, tap and drag to select the area to crop. Tap outside the box to stop cropping.

- To adjust the brightness and contrast levels of a picture, tap **Menu > AutoCorrect**.

Note To undo an edit, tap **Menu > Undo**. To cancel all unsaved edits you made to the picture, tap **Revert to Saved**.

To set a picture as the Today screen background

You can use a picture as the background on the Today screen.

1. Tap **Start > Programs > Pictures & Videos**.
2. Select the picture you want to set as the background.
3. Tap **Menu > Set as Today Background**.
4. In **Transparency level**, select a higher percentage for a more transparent picture, or a lower percentage for a more opaque picture.
5. Tap **OK**.

To send pictures and video clips with messages

You can send pictures and video clips to other devices by attaching them to your messages.

1. First, set up Messaging to send and receive messages.
2. From the Pictures & Videos programme, select the item you want to send.
3. Tap **Menu > Send**.
4. Choose an account from which you want to send.

A new message is created with the item attached.

Note You can also choose to send the media file with your MMS message directly by selecting the item and tapping **Menu > Send via MMS**.

5. Enter the recipient name and subject, and tap **Send**.
The message will be sent the next time you synchronise your MDA Pro.

Note Pictures and video clips are saved automatically before they are sent.

To beam a picture

You can beam a picture to your friends or a family member using Infrared.

1. Tap **Start > Programs > Pictures & Videos**.
2. Select the picture you want to beam.
3. Tap **Menu > Beam**.
4. Select a device to beam the picture.
5. Tap **OK**.

To assign pictures to contacts

You can assign a picture to a contact so that you can easily identify the contact at any point of time.

1. Tap **Start > Programs > Pictures & Videos**.
2. Select the picture you want to assign to a contact.
3. Tap **Menu > Save to Contact**.
4. Tap the contact, or navigate and tap **Select** to choose the contact from your Contacts list.

To use advance options

1. Tap **Start > Programs > Pictures & Videos**.
2. Select the picture for which you want to configure further settings.
3. Tap **Menu > Options**.

The Options screen is displayed.

The Options screen allows you to do the following:

- Resize a picture so that you can send it faster to someone using your e-mails.
- Configure the view settings during slide shows and activate screensaver options.
- Configure your MDA Pro camera and camcorder settings.

8.3 Using Windows Media Player

You can use Microsoft Windows Media Player 10 Mobile for MDA Pro to play digital audio and video files that are stored on your MDA Pro or on a network, such as on a Web site.

Using Windows Media Player, you can play both audio and video files. These are the following file formats that are supported by this version of Windows Media Player.

File Formats Supported	File Extensions
Video	
▪ Windows Media Video	.wmv, .asf
▪ MPEG4 Simple Profile	.mp4
▪ H.263	.3gp
▪ Motion JPEG	.avi
▪ 3GPP2	.3g2
Audio	
▪ Windows Media Audio	.wma
▪ MP3	.mp3
▪ MIDI	.mid, .midi, .rmi
▪ AMR Narrow Band	.amr
▪ AMR Wide Band	.awb
▪ AAC	.m4a
▪ 3GPP2	.gcp

About the controls

The following are available controls on the Windows Media Player.

This control	Does this	This control	Does this
	Plays a file.		Increases the volume level.
	Pauses a file.		Decreases the volume level.
	Skips to the beginning of the current file or to the previous file.		Turns the sound on or off.
	Skips to the next file.		Displays a video by using the entire screen (full screen).
	Adjusts the playback progress of a selected file.		Displays a Web site where you can find music and videos to play.

Note If your MDA Pro hardware supports it, you can rewind and fast-forward files by pressing and holding the Left/Right controls.

About the screens and menus

Windows Media Player has three primary screens:

Playback screen. The default screen that displays the playback controls (such as Play, Pause, Next, Previous, and Volume), the album art window, and the video window. You can change the appearance of this screen by choosing a different skin.

Now Playing screen. The screen that displays the Now Playing playlist. This special playlist indicates the currently playing file and any files that are “queued up” to play next.

Library screen. The screen that lets you quickly find your audio files, video files, and playlists. It contains categories such as My Music, My Video, My TV, and My Playlists.

At the bottom of each screen is a menu called **Menu**. The commands on this menu change depending upon which screen you are viewing.

Playback screen menu

When you are viewing the Playback screen, the following commands appear on **Menu**.

This control	Does this
Play/Pause	Starts or pauses playback.
Repeat	Plays the items in the Now Playing playlist repeatedly.
Stop	Stops playback.
Full Screen	When a video is playing, displays it by using the entire screen.
Library	Displays the Library screen so you can choose a file to play.
Open URL	Lets you play a file on a network, such as the Internet.
Options	Lets you adjust various Windows Media Player options, including network, skin, and hardware button options.
Properties	Displays information about the currently playing file.
About	Displays information about Windows Media Player, such as the version number.

Now Playing screen menu

When you are viewing the Now Playing screen, the following commands appear on **Menu**.

This control	Does this
Library	Displays the Library screen so you can choose a file to play.
Move Up	Moves the selected item up in the playlist order.
Move Down	Moves the selected item down in the playlist order.
Remove from Playlist	Deletes the selected item from the playlist.
Clear Now Playing	Deletes all items from the Now Playing playlist.
Error Details	Displays error information about the selected item (an exclamation mark appears before the item name if error details are available).
Properties	Displays information about the selected file.

Library screen menu

When you are viewing the Library screen, the following commands appear on **Menu**.

This command	Does this
Queue Up	Adds the selected item to the end of the current (Now Playing) playlist.
Delete from Library	Deletes the selected item from the library.
Update Library	Adds new items to the library by searching your device or storage card.
Open File	Lets you find and play files that are stored on your device or storage card but that are not in the library..
Properties	Displays information about the selected file.

About licenses and protected files

Some content (such as digital media files downloaded from the Internet, CD tracks, and videos) have associated licenses that protect them from being unlawfully distributed or shared. Licenses are created and managed by using digital rights management (DRM), which is the technology for securing content and managing its access rights. Some licenses may prevent you from playing files that have been copied to your device. Files that have licenses associated with them are called “protected files.”

If you want to copy a protected file from your PC to your device, use the desktop Player to synchronise the file to your device (instead of dragging the file from a folder on your PC to a folder on your device, for example). This will ensure that the license is copied along with the protected file. For more information about synchronising files to your MDA Pro and other mobile devices, see desktop Player Help.

Note You can view the protection status for a file by checking its file properties (tapping **Menu > Properties**).

To play items on your MDA Pro

Use the library to find and play songs, videos, and playlists that are stored on your MDA Pro or removable storage card.

1. If you are not on the Library screen, tap **Menu > Library**.
2. On the Library screen, tap the Library arrow (near the top of the screen), and then tap the library that you want use (for example, My Device or Storage Card).
3. Tap a category (for example, My Music or My Playlists), tap and hold the item that you want to play (such as a song, album, or artist name), and then tap **Play**.

Note To play a file that is stored on your device but is not in a library, on the Library screen, tap **Menu > Open File**. Tap and hold the item that you want to play (such as a file or a folder), and then tap **Play**.

To play an item on a network

Use the **Open URL** command to play a song or video that is stored on the Internet or on a network server.

1. If you are not on the Playback screen, tap **OK** to close the current screen and display the Playback screen.
2. Tap **Menu > Open URL**.
3. Do one of the following:
 - In the **URL** box, enter a network address.
 - In the **History** box, tap a URL that you have previously used.

Note To play an item on a network, you must be connected to a network. For more information about creating a remote connection between your device and a network, see [Connections Help on your device](#).

Copy files to your device

Use the latest version of the desktop Player (Windows Media Player 10 or later) to synchronise digital media files to your device (instead of dragging a file from a folder on your PC to a folder on your device, for example). Using the desktop Player ensures that licenses are copied with protected files.

When synchronising files, always synchronize the files to a storage card that is inserted into your device. Do not synchronize to a storage card that is inserted into a storage card reader. In addition, do not synchronize to the internal storage location (RAM) in your device.

For more information about synchronising files to mobile devices, see desktop Player Help on the PC.

Note Audio files copy faster if the desktop Player is configured to automatically set the quality level for audio files copied to your device. For more information, see [desktop Player Help on the PC](#).

Accessibility for people with disabilities

Microsoft is committed to making its products and services easier for everyone to use. Many accessibility features have been built into Microsoft products, including features for individuals who have difficulty typing or using a mouse, who are blind or have low vision, or who are deaf or hard-of-hearing. For more information about the following topics, see the Accessibility section of the Microsoft Web site (<http://www.microsoft.com/enable/default.aspx>).

- Accessibility in Microsoft Windows
- Adjusting Microsoft products for people with accessibility needs
- Free step-by-step tutorials
- Microsoft documentation in alternative formats
- Assistive technology for Windows
- Customer service for people who are deaf or hard-of-hearing

Note The information in this section applies to users who license Microsoft products in the United States. If you obtained this product outside the United States, your package contains a subsidiary information card that you can use to contact your subsidiary about the products and services available in your area.

Troubleshooting

If you encounter a problem while using the Windows Media Player, a number of resources are available to help you troubleshoot the issue.

For more information, see the Troubleshooting Windows Media Player Mobile page at the Microsoft Web site (<http://www.microsoft.com/windows/windowsmedia/player/windowsmobile/troubleshooting.aspx>).

8.4 Using Streaming Video Player

Streaming Video on your device allows you to play video streams accompanying audio directly from the web. A video stream is a file made up of 'moving images' that is transferred in packets over the network and displayed by the viewer as it arrives, along with the audio. With a video stream, a user does not have to wait until a large file is downloaded to their device before watching the video or hearing the sound. Instead, the media is sent in a continuous stream and is played as it arrives, along with the audio. The Streaming Video program on your device plays the video stream from the buffer which is often a block of local memory (RAM). To watch such video streams, you need the Streaming Video program, which decompresses and sends video data to the display and audio data to the speakers. A video stream is usually sent from pre-recorded video files, but can also be distributed as part of a live broadcast 'feed'. The Streaming Video program on your device supports only RTSP links containing .3gp and .mp4 files. A streaming video files that is downloaded from an RTSP link and played on your device has .sdp file extension.

Streaming Video Player

Play a streaming video file on your device

To play a streaming video file on your device, launch Streaming Video and specify the streaming video file name and location to play. However, you can also browse the Internet to locate the streaming video files or live video feeds (RTSP links containing associated video feeds), and tap them directly to play on your device with the Streaming Video program.

1. Tap **Start > Programs > Streaming Video**.
2. From the programme, tap **Connect**.
3. Enter the URL for the Web site (rtsp://) and the filename (.sdp).
4. Tap **Done**.
5. Tap **Menu > Play/Pause** to play or pause the streaming video.
6. Tap **Zoom In** or **Zoom Out** to enlarge or reduce the video screen size.
7. Tap **Done**.

You can also use the corresponding icons from the programme to play, pause, stop, mute, zoom in, and zoom out the streaming video. To rewind or forward the video, tap and drag the moving slider on the navigation bar.

Note Before you launch the Streaming Video program, make sure that you are connected to the Internet.

To view streaming video file information

You can view the properties and general information of a streaming video clip, such as file format, audio codec, dimension, frames, and duration of the video.

- Tap **Menu > Properties** from the programme.

To configure streaming video connection settings

You can configure the connection settings for a streaming video file, such as whether you want to connect to the Internet or a corporate network (intranet) to locate a streaming video clip. You can also specify a range of port numbers to use for streaming.

- Tap **Menu > Options** from the programme.

Chapter 9

Using Other Applications

9.1 Word Mobile

9.2 Excel Mobile

9.3 Viewing Slide Shows with PowerPoint Mobile

9.4 Using MIDlet Manager

9.5 Using ZIP

9.1 Word Mobile

Word Mobile is a streamlined version of Microsoft Word. Word documents created on your PC can be opened and edited on your device. You can also create and edit documents and templates in Word Mobile and save them as .doc, .rtf, .txt, and .dot files.

You can have only one document open at a time. When you open a second document, the first one is saved and closed automatically.

When you close a newly created document, it is automatically named after the first several words in the document and placed in the Word Mobile document list. You can easily rename the document with a more meaningful name and move it to another folder or a storage card.

To create a file

1. In Word Mobile, tap **New**.
2. You will see either a blank document or template, depending on what you have selected as the default template.
3. Enter text as desired.
4. When finished, tap **OK** to save the file.

Unsupported features in Word Mobile

Word Mobile does not fully support some features of Microsoft Word, such as revision marks and password protection. Some data and formatting may be lost when you save the document on your device.

The following features are not supported in Word Mobile.

- **Backgrounds**
- **Shapes and text boxes**
- **Artistic page borders**
- **Smart tags**
- **Metafiles**
- **Bi-directional text.** While Word Mobile will open documents containing bi-directional text, the indentations and alignment may be displayed and saved incorrectly.
- **Password-protected files.** Word Mobile does not support opening password-protected documents. You must first remove the password protection in Word on the PC if you want to view the document on the device.

- **Document protection.** Word Mobile does not support displaying files that have been protected in Word on the PC.

The following features are partially supported in Word Mobile.

- **Picture bullets**
- **Revision marks**
- **Table styles**
- **Underline styles.** Underline styles not supported by Word Mobile are mapped to one of the four supported styles: regular, dotted, wavy, or thick/bold/wide.
- **Legacy Pocket Word files.** You can open *.psw files in Word Mobile; however, if you edit a file, you will need to save it in *.doc, *.rtf, *.txt, or *.dot format.

The following features are not supported on the device; however, they are retained in the file so that when a file is opened on the PC again, they appear as expected.

- **Footnotes, endnotes, headers, footers**
- **Page breaks**
- **Lists**
- **Fonts and font sizes.** Fonts not supported by the device are mapped to the closest font available, although the original font will be listed on the device.

To get more help about Word Mobile

- From within Word Mobile, tap **Start > Help**.

9.2 Excel Mobile

Excel Mobile makes it easy for you to open and edit Excel workbooks and templates created on your PC. You can also create new workbooks and templates on your device.

Tips Work in full-screen mode to see as much of your workbook as possible.

Tap View > Zoom and select a percentage so that you can easily read the worksheet.

Unsupported features in Excel Mobile

Excel Mobile does not fully support some features such as formulas and cell comments. Some data and formatting may be lost when you save the workbook on your device. Note the following Excel Mobile formatting considerations:

- **Alignment.** Horizontal, vertical, and wrap-text attributes remain the same, but vertical text appears horizontal.
- **Borders.** Appear as a single line.
- **Cell patterns.** Patterns applied to cells are removed.
- **Fonts and font sizes.** Fonts not supported by your device are mapped to the closest font available. The original font is listed on your device. When the workbook is opened in Excel on your PC again, the data is displayed in the original font.
- **Number formats.** Numbers formatted using the Microsoft Excel 97 conditional formatting feature are displayed in Number format.
- **Formulas and functions.** If an Excel file contains a function that is not supported by Excel Mobile, the function is removed, and only the returned value of the function appears. The following formulas are also converted to values: formulas entered as an array or containing an array argument, for example, =SUM({1;2;3;4}); formulas containing external link references or an intersection range reference; and formulas containing references past row 16384 are replaced with #REF!
- **Protection settings.** Most worksheet and workbook protection features are disabled but not removed. However, support for password protection has been removed. Workbooks that are password-protected or workbooks in which one or more worksheets are password-protected cannot be opened.

You must remove the password protection in Excel on the PC and then synchronize to open the file on the device.

- **Zoom settings.** Are not retained. Excel supports a per worksheet zoom setting, while the Excel Mobile zoom setting is applied to the entire workbook.
- **Worksheet names.** Names that reference worksheets within the same workbook are displayed accurately, but names that refer to other workbooks, arrays, for example, $=\{1;2;3;4\}$, array formulas, or intersection ranges are removed from the name list. If a name is removed from the list, it is left in formulas and functions, causing those formulas to be resolved as “#NAME?”. All hidden names are not hidden.
- **AutoFilter settings.** Are removed. However, you can use the **AutoFilter** command in Excel Mobile to perform similar functions. If you have an AutoFilter applied to a worksheet that causes rows to be hidden, the rows remain hidden when the file is opened in Excel Mobile. Use the **Unhide** command to display the hidden rows.
- **Chart formatting.** All charts will be saved the way they are shown in Excel Mobile. Unsupported chart types are changed to one of these supported types: Column, Bar, Line, Pie, Scatter, and Area. Background colors, gridlines, data labels, trend lines, shadows, 3D effects, secondary axes, and logarithmic scales are turned off.
- **Worksheet features.** The following features are not supported in Excel Mobile and are removed or modified when a workbook is opened on the device: hidden sheets are not hidden; VBA modules, macro sheets, and dialog sheets are removed and replaced with a place holder sheet; text boxes, drawing objects, pictures, lists, conditional formats, and controls are removed; pivot table data is converted to values.

To get more help about Excel Mobile

- From within Excel Mobile, tap **Start > Help**.

9.3 Viewing Slide Shows with PowerPoint Mobile

With PowerPoint Mobile, you can open and view slide show presentations created on your PC in *.ppt and *.pps format with PowerPoint '97 and later. Many presentation elements built into the slide shows such as slide transitions and animations will play back on the device. If the presentation is set up as a timed slide show, one slide will advance to the next automatically. Links to URLs are also supported.

PowerPoint features not supported on the device include:

- Notes. Notes written for slides will not be visible.
- Rearranging or editing slides. PowerPoint Mobile is a viewer only.
- File formats. Files created in *.ppt format earlier than PowerPoint '97 and HTML files in *.htm and *.mht formats are not supported.

To start a slide show presentation

1. Tap **Start > Programs > PowerPoint Mobile**.
2. In the presentation list, tap the slide show you want to view.
3. Tap the current slide to advance to the next slide.

If the presentation is set up as a timed slide show, slides will advance automatically.

To stop a slide show

- In a PowerPoint Mobile presentation, tap **▲ | > End Show**.

To navigate between slides

You can advance to the next slide if a presentation is not set up as a timed slide show, return to the previous slide, or go to any slide out of sequence.

1. Tap **Start > Programs > PowerPoint Mobile**.
2. Open the presentation you want to view.
3. Tap **▲ | > Next** or **Previous**, or tap **Go to Slide** and tap the slide you want to view.

Notes If you have zoomed in to see a slide in more detail, you cannot navigate to another slide until you zoom out.

Tapping Next or **Previous** may play an animation on a slide rather than navigate to another slide.

Tip Simply tap the current slide to go to the next one.

9.4 Using MIDlet Manager

MIDlets are Java applications that can run on mobile devices. Your device supports Java 2 Micro Edition, J2ME. The MIDlet Manager allows you to download Java applications, such as games and tools that are specifically designed for mobile devices. Although some Java applications and games have already been installed on your device, the Java MIDlet Manager gives you the flexibility of installing and managing additional J2ME applications from the Internet.

To install MIDlets from the Internet

1. Locate the MIDlet/MIDlet suite while connected to the Internet.
2. Select the MIDlet/MIDlet suite to download.
3. Confirm to start downloading.
4. Run the file(s) to install.

Note You can cancel the installation at any time.

To install MIDlets from a PC

You can install the MIDlets/MIDlet suites on your device from a PC using the USB sync cable, the optional cradle, infrared, or Bluetooth. MIDlets copied to your device using infrared, Bluetooth, or e-mail attachments are automatically saved in the My Documents folder. However, you can copy the MIDlet file(s) from a PC to any of the following temporary folders on your device from where MIDlet Manager can install them.

- Device memory: ../My device/My Documents/My MIDlets
- Storage card: ../My device/Storage Card

Note If the My MIDlets folder does not exist in My Documents, you can create one with the same folder name. However, a folder named Storage Card automatically appears after you insert a storage card into your device.

To install a MIDlet/MIDlet suite

1. Tap **Start > Programs > MIDlet Manager > Menu > Install**.
2. Select the MIDlet/MIDlet suite from the list.

3. Tap **Install** from the shortcut menu.
4. Confirm to complete the installation.

Note To remove the MIDlet files from the temporary folder, tap **Delete** from the shortcut menu.

MIDlet Manager

To run MIDlets on your device

1. Tap **Start > Programs > MIDlet Manager**.
2. Tap a MIDlet to run.

To view the MIDlets currently running

- On the MIDlet Manager screen, tap **Show > Running**.

Note To view the most recently used MIDlets, tap **Show > Recent**.

To stop running a MIDlet

1. Tap **Start > Programs > MIDlet Manager**.
2. Tap **Show > Running**.
3. Tap and hold a MIDlet on the Running MIDlets screen, and tap **Stop**.

Note To stop all MIDlets currently running on your device, tap **Menu > Stop All**.

**Manage MIDlets/MIDlet suites**

You can organize the MIDlets into groups and define custom groups. You can also change the default settings for a MIDlet.

To customise the display settings

1. Tap **Sort By** at the top of the MIDlet Manager screen.
2. Choose to sort by **Name** or by **Size**.

To change the display name of a MIDlet

1. Tap and hold a MIDlet, and tap **Rename**.
2. Enter a new name for the MIDlet.
3. Tap **OK**.

Note You cannot change the name of a MIDlet suite.

To uninstall a MIDlet/MIDlet suite

Before you uninstall a MIDlet/MIDlet suite, make sure that it is not running.

1. Tap and hold the MIDlet/MIDlet suite on the MIDlet Manager screen, and tap **Uninstall**.
2. Tap **OK** to confirm.

Note You cannot uninstall a single MIDlet from a MIDlet suite; you can uninstall only the complete MIDlet suite.

To check storage space

- Tap **Menu > System Info** on the MIDlet Manager screen to see how much device storage space is used by MIDlets.

To select a network type

- Tap **Menu > Choose Network Type** on the MIDlet Manager screen, and select a network type from the list.

To configure MIDlet security

You can adjust security settings for each MIDlet/MIDlet suite.

1. Tap and hold a MIDlet.
2. Tap **Security** from the shortcut menu.

Note that some features may not be available for all MIDlets/MIDlet suites.

Following are the security options that you can set for a running MIDlet/MIDlet suite.

Security Option	Description
Net Access	Determines whether a MIDlet/MIDlet suite can access the Internet.
Local Connectivity	Enables a MIDlet/MIDlet suite to access services, such as infrared and Bluetooth.
App Auto Run	Enables a MIDlet/MIDlet suite to run at specified times, or any time.
Messaging	Determines whether a MIDlet/MIDlet suite can send and/or receive SMS messages.
Multimedia Recording	Enables a MIDlet/MIDlet suite to record sounds and images.

Error messages

The following is a list of error messages that you may receive while managing and using MIDlets/MIDlet suites on your device.

Error Message	Description
Either RAM shortage, or insufficient space on the file system	There is not sufficient memory on your device.
Network out	There is no network connection available.
The jar size does not match that specified in the jad	The installation information provided by the MIDlet manufacturer is inaccurate.
The jar manifest does not match the jad	The installation information provided by the MIDlet manufacturer is inaccurate.
Invalid Java application descriptor (jad)	There is a problem with the installation file provided by the MIDlet manufacturer.
Invalid Java archive (jar)	There is a problem with the installation file provided by the MIDlet manufacturer.
This Java application is not compatible with this device	One or more features required by this MIDlet is not available on your device.

9.5 Using ZIP

This feature allows you to save memory and increase the storage capacity of your device by compressing files in the conventional ZIP format. You can view and extract archive files received from various sources. You can also create new .zip files on your device.

Start ZIP and Open .zip files

You can use ZIP to either archive files or open an existing archive file on your device. Each time you start ZIP on your device, it searches for files that have the .zip file extension, and displays these files on the Archive List screen.

To start ZIP on your device

1. Tap **Start > Programs > ZIP**.
2. Open a file using any of the following:
 - Select a file and tap **File > Open Archive**.
 - Tap and hold a file and tap **Open Archive**.
 - Double-tap a file.

View Archive List screen

The Archive List screen displays the .zip files on your device in the order they are found. While adding files to an archive file, ZIP automatically compresses the files before adding them. On the Archive List screen, you can use the File menu and View menu. Some of the options available on the File menu also appear on the toolbar of the Archive List screen.

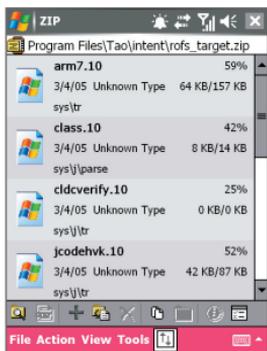

Zip, List View

- **File** menu
 - **New Archive.** Lets you create a new archive file with a .zip file extension.
 - **Open Archive.** Lets you open a ZIP file.
 - **Rename Archive.** Lets you rename an existing ZIP file.
 - **Delete Archive.** Lets you remove a ZIP file.
 - **Archive Properties.** Displays information about the current archive file.
 - **Send.** Lets you send a ZIP file either via e-mail or infrared.
 - **Recent.** Displays a list of recently used files.
 - **Options.** Lets you set various view mode and compression level options for an archive file.
 - **About ZIP.** Displays version and copyright information.
- **View** menu
 - **Large Icons.** Displays all files as large icons.
 - **Small Icons.** Displays all files as small icons.
 - **List.** Displays all files in a list.
 - **Details.** Displays all files in detail.

Note You cannot select multiple ZIP files.

Manage a ZIP file

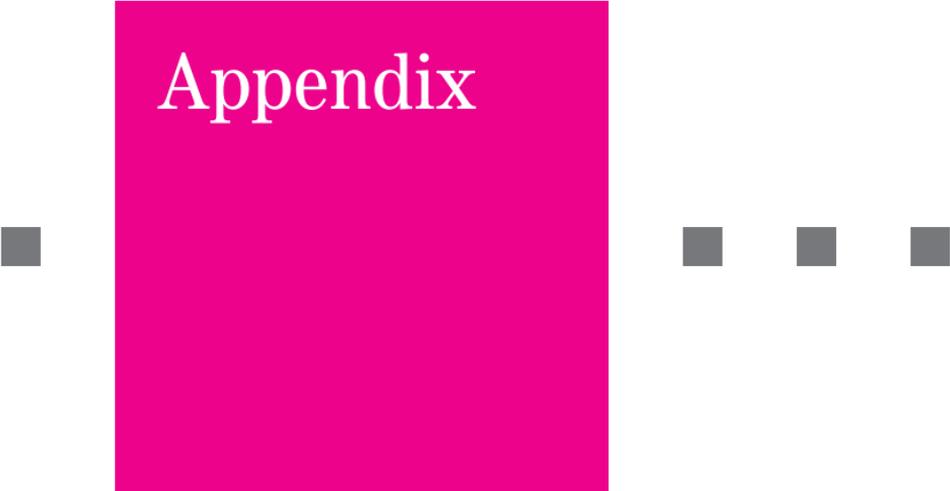

After you open a ZIP file, you can either extract the file to a folder or location, or perform various tasks on the file. The icons on the toolbar of the ZIP screen also provide some of these functions. Following is an illustration of the ZIP screen.

Zip, Archive View

- **File** menu
 - **New Archive.** Creates a new archive file with a .zip file extension.
 - **Find Archive.** Locates an archive file.
 - **Close Archive.** Closes an archive file.
 - **Rename Archive.** Lets you rename an archive file.
 - **Delete Archive.** Removes an archive file.
 - **Archive Properties.** Displays information about the current archive file.
 - **Integrity Test.** Checks the selected file for data correctness and reliability.
 - **Refresh.** Lets you refresh the content of the current archive file.
 - **Recent.** Displays a list of recently opened archive files, including the current file.

- **Action** menu
 - **Add.** Lets you add files to the archive.
 - **Extract.** Lets you extract files from the archive to the folder of your choice.
 - **Delete.** Removes files from the archive.
 - **Send via E-mail.** Lets you send the archive file via e-mail.
 - **Send via Infrared.** Lets you send the archive file via infrared.
 - **View.** Lets you view a file from the archive file.
 - **Multi-Select Mode.** Lets you select multiple files in the archive file.
 - **Select All.** Selects all files in the archive file.
 - **Select None.** Clears all selected files in the archive file.
 - **Select Invert.** Selects in reverse from the archive file.
- **View** menu
 - **Show Folders.** Shows the folder instead of the entire path.
 - **Up One Level.** Takes you up one level from the current directory.
 - **Large Icons.** Displays all files as large icons.
 - **Small Icons.** Displays all files as small icons.
 - **List.** Displays all files in a list.
 - **Details.** Displays all files in detail.
 - **Extended.** Displays all files in detail.
 - **Sort by.** Sorts all files by the sort order you select.
 - **Properties.** Displays information about the current file.
 - **Status Pane.** Displays the status of the current file.
 - **Toolbar.** Shows or hides the toolbar.
- **Tools** menu
 - **Options.** Lets you set various view mode and compression level options for an archive file.
 - **About Zip.** Displays version and copyright information.

A.4 Index

A.1 Regulatory Notices

Regulatory Agency IDs

For regulatory identification purposes, your product is assigned a model number of PU10.

To ensure continued reliable and safe operation of your device, use only the accessories listed below with your PU10.

The “x” portion of the above model number(s) could be any alphanumeric character (or blank) denoting external cosmetic changes.

This product is intended for use with a certified Class 2 Limited Power Source, rated 5 Volts DC, maximum 2 Amp power supply unit.

European Union Notice

Intended for use in EU.

Products with CE marking comply with the R&TTE Directive (99/5/EC), the EMC Directive (89/336/EEC), and the Low Voltage Directive (73/23/EEC) issued by the Commission of the European Community.

Compliance with these directives implies conformity to the following European Norms (in parentheses are the equivalent international standards).

- EN 301 908
Electromagnetic compatibility and radio spectrum matters (ERM); Base stations (BS) and user equipment (UE) for IMT-2000 third generation cellular networks.
- EN 301 489-24
Electromagnetic compatibility and radio spectrum matters (ERM); Electromagnetic compatibility (EMC) standard for radio equipment and services; Part 24: Specific conditions for IMT-2000 CDMA direct spread (UTRA) for mobile and portable (UE) radio and ancillary equipment.
- EN 60950-1 (IEC 60950-1)
Safety of Information Technology Equipment.
- ETSI EN 301 511
Global system for mobile communications (GSM); Harmonized EN for mobile stations in the GSM 900 and GSM 1800 bands, covering essential requirements of article 3.2 of the R&TTE directive (1995/5/EC).

- ETSI EN 301 489-1
Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements.
- ETSI EN 301 489-7
Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 7: Specific conditions for mobile and portable radio and ancillary equipment of digital cellular radio telecommunications systems (GSM and DCS).
- ETSI EN 301 489-17
Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for 2.4 GHz wideband transmission systems and 5 GHz high performance RLAN equipment. Accessories Model Number CradlePH15x
- ETSI EN 300 328
Electromagnetic compatibility and Radio spectrum Matters (ERM); Wideband Transmission systems; data transmission equipment operating in the 2.4 GHz ISM band and using spread spectrum modulation techniques.
- GSM11.10
- ANSI/IEEE C.95.1-1992
Specific absorption rate in mobile phone emission condition for body health.
- EN50360, EN50361, EN50371 for SAR

Important Health and Safety Information

Retain and follow all product safety and operating instructions. Observe all warnings in the operating instructions on the product.

To reduce the risk of bodily injury, electric shock, fire, and damage to the equipment, observe the following precautions.

General Precautions

- Heed service markings
Except as explained elsewhere in the Operating or Service documentation, do not service any product yourself. Service needed on components inside these compartments should be done by an authorised service technician or provider.
- Damage requiring service
Unplug the product from the electrical outlet and refer servicing to an authorised service technician or provider under the following conditions:
 - Liquid has been spilled or an object has fallen into the product.
 - The product has been exposed to rain or water.
 - The product has been dropped or damaged.
 - There are noticeable signs of overheating.
 - The product does not operate normally when you follow the operating instructions.
- Avoid hot areas
The product should be placed away from heat sources such as radiators, heat registers, stoves, or other products (including amplifiers) that produce heat.
- Avoid wet areas
Never use the product in a wet location.
- Avoid pushing objects into product
Never push objects of any kind into cabinet slots or other openings in the product. Slots and openings are provided for ventilation. These openings must not be blocked or covered.
- Mounting Accessories
Do not use the product on an unstable table, cart, stand, tripod, or bracket. Any mounting of the product should follow the manufacturer's instructions, and should use a mounting accessory recommended by the manufacturer.
- Avoid unstable mounting
Do not place the product with an unstable base.

- Use product with approved equipment
This product should be used only with personal computers and options identified as suitable for use with your equipment.
- Adjust the volume
Turn down the volume before using headphones or other audio devices.
- Cleaning
Unplug the product from the wall outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning, but NEVER use water to clean the LCD screen.

Safety Precautions for Power Supply Unit

- Use the correct external power source
A product should be operated only from the type of power source indicated on the electrical ratings label. If you are not sure of the type of power source required, consult your authorised service provider or local power company. For a product that operates from battery power or other sources, refer to the operating instructions that are included with the product.
- Handle battery packs carefully
This product contains a Li-Ion Polymer battery. There is a risk of fire and burns if the battery pack is handled improperly. Do not attempt to open or service the battery pack. Do not disassemble, crush, puncture, short external contacts or circuits, dispose of in fire or water, or expose a battery pack to temperatures higher than 60 °C (140 °F).

Warning! DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. TO REDUCE RISK OF FIRE OR BURNS, DO NOT DISASSEMBLE, CRUSH, PUNCTURE, SHORT EXTERNAL CONTACTS, EXPOSE TO TEMPERATURE ABOVE 60 °C (140 °F), OR DISPOSE OF IN FIRE OR WATER. REPLACE ONLY WITH SPECIFIED BATTERIES. RECYCLE OR DISPOSE OF USED BATTERIES ACCORDING TO THE LOCAL REGULATIONS OR REFERENCE GUIDE SUPPLIED WITH YOUR PRODUCT.

SAR Information

SAR: 0.172 mW/g @ 10g (Europe); 0.293 mW/g @ 1g (Taiwan).

- EN 50360:2001

Product standard to demonstrate the compliance of mobile phones with the basic restrictions related to human exposure to electromagnetic fields (300 MHz - 3 GHz)

- EN 50371:2002

Generic standard to demonstrate the compliance of low power electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (10 MHz - 300 GHz) - General public

CE 0560 !

A.2 PC Requirement to Run ActiveSync 4.x

To connect your device to the PC, you have to installed Microsoft® ActiveSync® program on your PC. ActiveSync 4.0 is included in the Installation CD, which is compatible with the following operating systems and applications:

- Microsoft® Windows® 2000 Service Pack 4
- Microsoft® Windows® Server 2003 Service Pack 1
- Microsoft® Windows® Server 2003 IA64 Edition Service Pack 1
- Microsoft® Windows® Server 2003 x64 Edition Service Pack 1
- Microsoft® Windows® XP Professional Service Packs 1 and 2
- Microsoft® Windows® XP Home Service Packs 1 and 2
- Microsoft® Windows® XP Tablet PC Edition 2005
- Microsoft® Windows® XP Media Center Edition 2005
- Microsoft® Windows® XP Professional x64 Edition
- Microsoft® Outlook® 98, Microsoft® Outlook® 2000 and Microsoft® Outlook® XP, and Microsoft® Outlook® 2003 messaging and collaboration clients
- Microsoft® Office 97, excluding Outlook
- Microsoft® Office 2000
- Microsoft® Office XP
- Microsoft® Office 2003
- Microsoft® Internet Explorer 4.01 or later (required)
- Microsoft® Systems Management Server 2.0

A.3 Specifications

System Information

Processor	Intel Bulverde CPU at 520 MHz
Memory	- ROM : 128 MB - RAM : 64 MB
Operating System	Windows Mobile™ Version 5.0

Display

LCD Type	3.6" transfective TFT-LCD with back-light LEDs, touch-sensitive screen
Resolution	640 x 480 with 65,536 colors
Alignment Support	Portrait and Landscape

GSM/GPRS (Tri-band) Module

Functionality	GSM/GPRS (900, 1800, and 1900) and WCDMA
Mode	Dual (UMTS & GSM)
Internal Antenna	Yes

Camera Module

Type	Main Camera : Color CMOS with dust-proof cover Second Camera : Color CMOS
Resolution	Main Camera : 1.3 M with Flash/Video Light, Full Screen Preview, with support for QQVGA to 2.0M Second Camera : with support for QCIF to CIF
Camcorder Resolution	Main Camera : Support Sub-QCIF to QVGA resolution Second Camera : Support Sub-QCIF to CIF resolution

Physical

Dimensions	81 mm (w) x 127.7mm (h) x 25mm (l)
Weight	285g (with battery)

Expansion Slots

SDIO/MMC Card	Yes
---------------	-----

Controls and Lights

Navigation Buttons	<p>5-way navigation pad</p> <ul style="list-style-type: none"> - 3 programme buttons : Backlight, Voice record/Voice recognition, Camera - 2 phone functions : Call, End - Volume control slider - Power On/Off - Reset button
--------------------	---

Keyboard	QWERTY type, 62 keys
----------	----------------------

LED	<p>Bi-color LED on the right side: Green and Orange for GSM standby, SMS message, GSM network status, notification, battery charging status.</p> <p>Bi-color LED on the left side: Blue and Green for Bluetooth system notification of powered-up and ready to transmit radio frequency signal, and Wi-Fi status.</p>
-----	---

Audio

Audio Controller	AGC
Microphone/Speaker	Built-in/Dual, Hands-free
Headphone	AMR/AMRWB/AAC/MP3 stereo

Connection

Infrared	IrDA FIR
I/O port	USB, SDIO/MMC
Antennat	External connector for WCDMA and GSM/GPRS
Audio	Stereo earphone/microphone jack
