

YOU'LL SPEND \$20,000 TO PUT YOUR KID THROUGH COLLEGE. WHY NOT SPEND \$630* TO HELP HIM GET THERE?

Today it seems like a student needs a college education just to get into college. Why not give your kid some extra help?

An Atari® 400™ Educational Computer is like having a private tutor in your home. Unlike human tutors, however, an Atari has infinite patience. Atari's Talk&Teach™ programs use a voice to ask questions. Then, before moving on, the programs wait for your child to get the right answer, so he discovers his mistakes right away instead of compounding his errors.

Using an Atari 400 also gives your young student valuable experience using a computer — a tool used more and more in high schools and colleges.

And most important, an Atari 400 doesn't just teach. It makes learning fun. With fascinating, easy-to-use programs on almost any subject. So why not spend a little of the money you're saving for your kid's college education to help make sure he'll be ready for it?
